

Enabling
decarbonization
through
self-regulating
energy systems

Corporate Presentation | 2023

Every utility will need BPL solutions

New demands on the grid: Distributed generation, EVs, and storage require high bandwidth and intelligence for grid management

Regulatory mandates: Compliance to provide detailed, realtime information to utility customers

Industry standards: In 2022, PRIME Alliance standardized BPL for deployment based on ITU's G.hn protocol

Advantages of BPL: High speed communication, edge computing, security, network coverage, lower cost, in one already proven integrated solution

“

smart grid communication is in **transition** from **narrow to broadband** communication...

...the industry is at an **inflection point** in the **adoption of BPL technology**.

[All utilities] which succeeded in their pilot projects and eventually moved to mass rollouts **chose the same product vendor... Corinex**

IDC Report

”

IDC Report, *Towards A Truly Smart Grid — The Case for Broadband Over Powerline*, 2021

About Corinex

Corinex is the sole provider of Broadband over Power Lines (BPL) solutions in mass rollout. Our solutions enable digitalization of the grid for energy service providers, electric utilities, EV manufacturers, and EV charging providers.

Our broadband offerings, EnergyGrid and GridValue, provide a complete solution that integrates distributed energy devices and enables real-time energy data, analytics and predictive models, with the highest level of security.

Commercial rollout of Corinex solutions demonstrates BPL's technological advantages, maturity and standardization, enabling mass adoption after a decades-long race with incumbent players.

Headquartered in Vancouver, BC

20 customers include 3 of the 10 largest European utilities:

ITU and PRIME
Alliance
standardized

About 1 million
BPL nodes
delivered

IDC report names Corinex technology leader:

12
patents in the
USA and the EU

250
person-years of
software development

Corinex offers end-to-end vertically integrated grid digitalization solutions

Products

Corinex Grid Nodes: data collection, computation and transmission over existing electric grid

Corinex EnergyGrid

Products are based on BPL chips that deliver cost-effective processing power for edge computing, high-speed resilient communication, and best-in-class energy security

Software

Electric grid network management

Corinex Core Edge Computing Firmware

High performance software environment open to applications of third parties

Corinex GridValue Software

Provides nation-wide real-time management of millions of networked devices

- Processes 2 million transactions per minute per server
- 200,000 concurrent (D)TLS¹ tunneling support

¹ Transport layer security that protects the transfer of data

Services

Product installation and network operation

Installation team

Operations team

Corinex enables energy redistribution at the local level, by providing key products, software, services

Products

Corinex Grid Nodes: data collection, computation and transmission over existing electric grid

Software

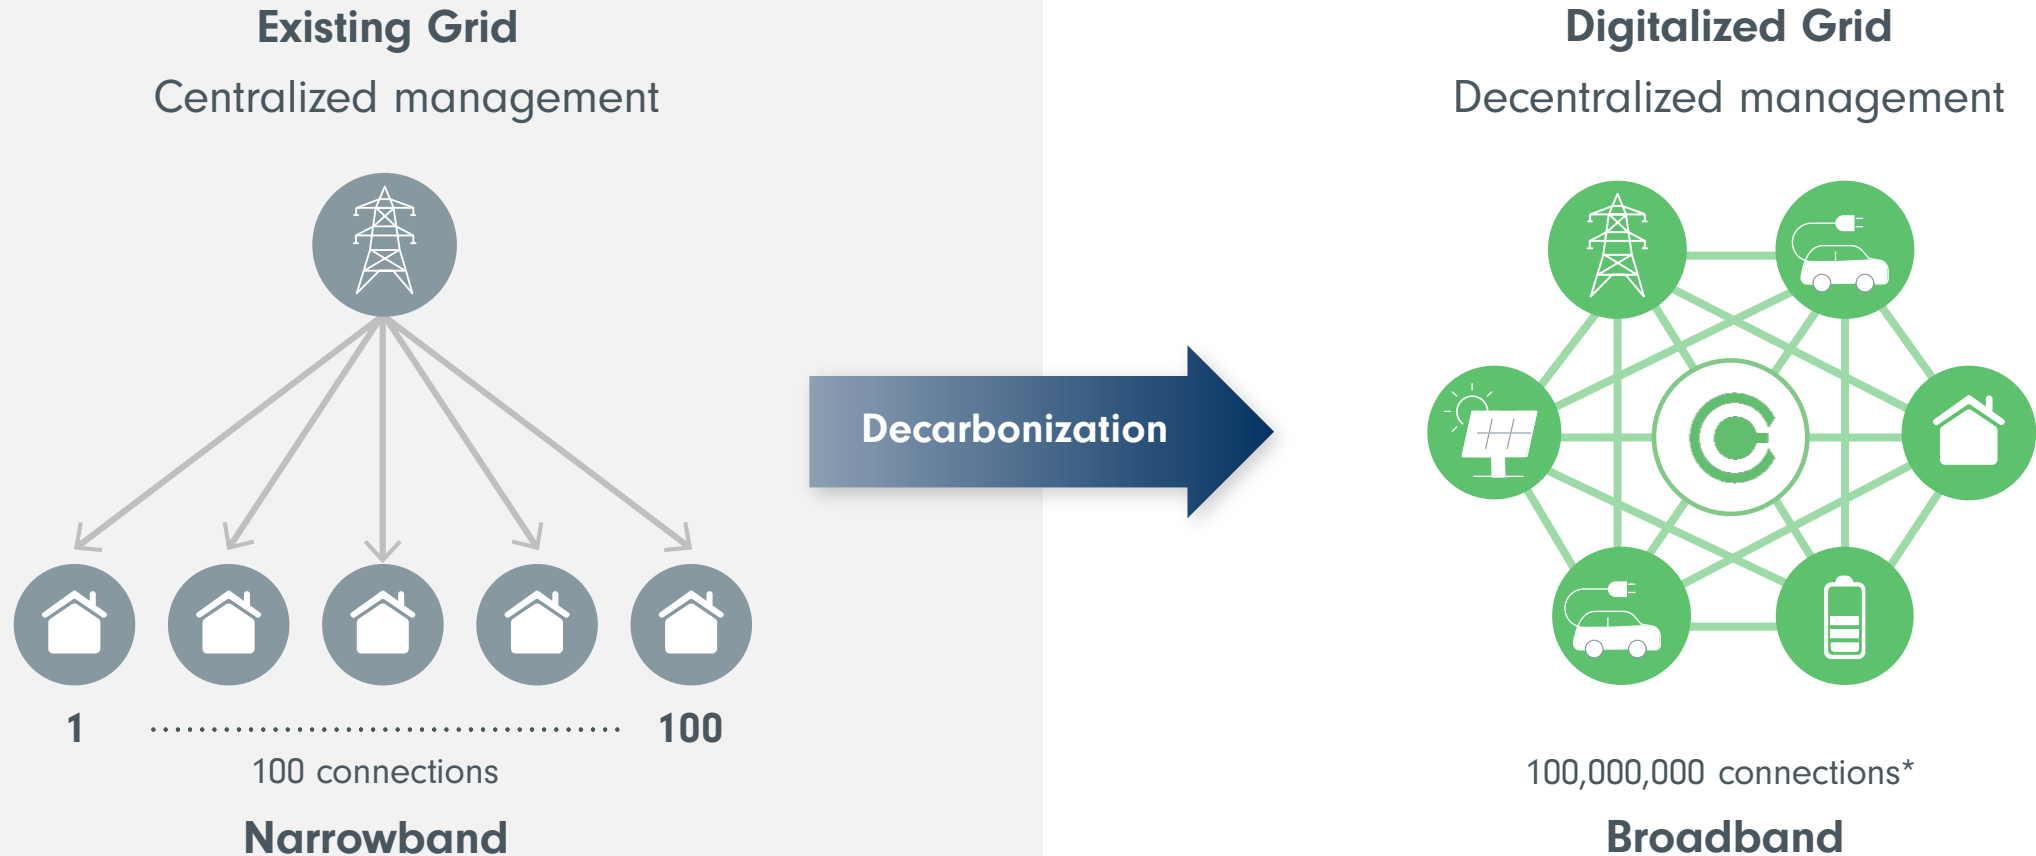

Electric grid network management

Services

Product installation and network operation

Decentralized energy production and storage require distributed intelligence and high bandwidth

* 100M connections is derived from 100 households, each of which has 4 devices: electric vehicle, battery storage, generation device (e.g., solar), and smart metering systems

Broadband communication and edge computing are required to enable self-regulating energy systems

Voice Providers

Millions of
internet users

Internetization

Internet Service Providers

Billions of
internet devices

E.g., Cisco

Utilities

Millions of
metered homes

Decarbonization

Energy Service Providers

Billions of
electricity devices

Corinex

One integrated solution based on a single chip provides all key functions for the new energy ecosystem

Three separate chips

Current technology requires three separate chips, and the performance is inadequate

Security
E.g., NXP

Edge Computing
E.g., TI / Intel

Communication
E.g., NB IoT – Nordic

One integrated chip

Interoperable solution based on BPL PRIME standard provides all three key functions on one chip

BPL PRIME

Security
Edge computing
Communication

Corinex BPL is faster and more cost-effective than competing technologies

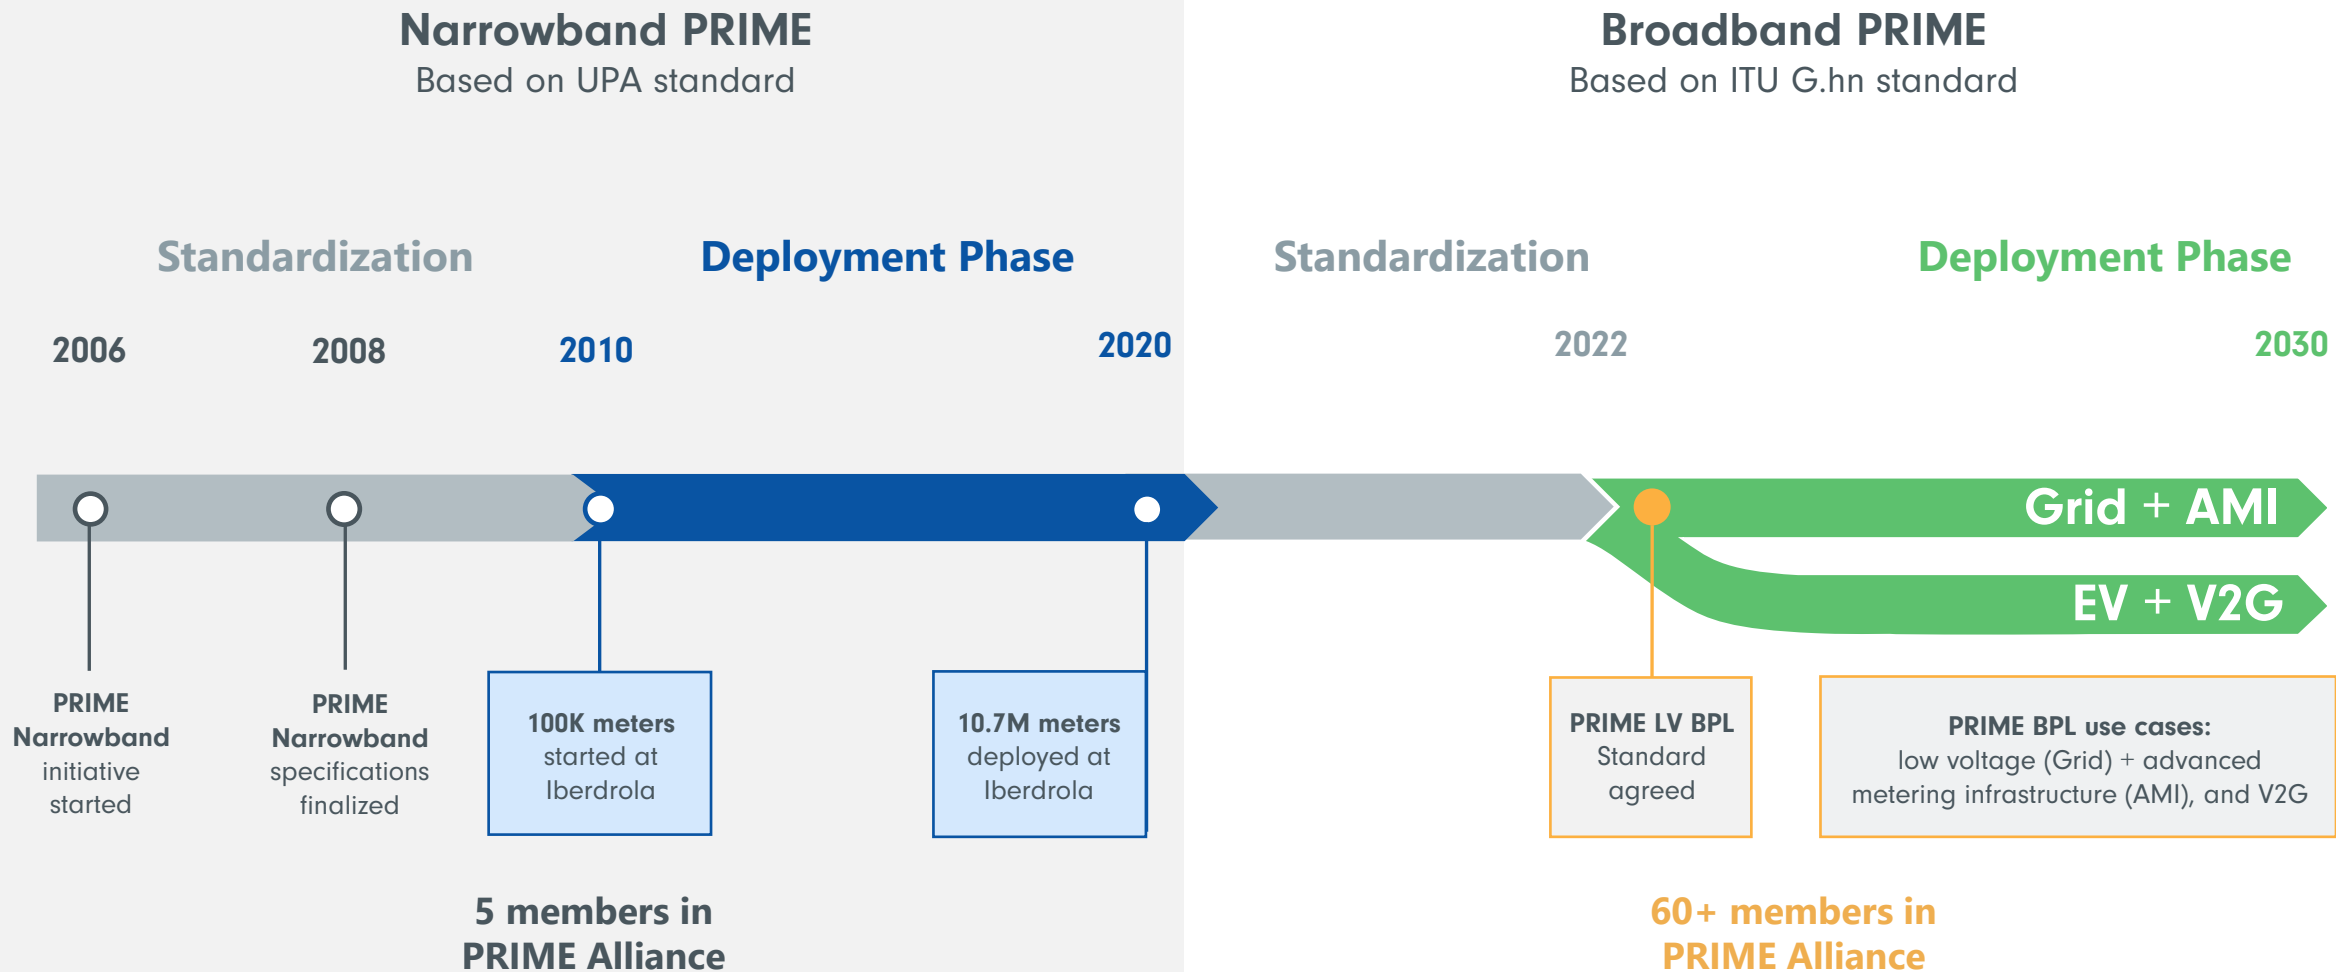

Data transmission speed in Mbps	
BPL PRIME	250.00 Mbps
5G ¹	100.00 Mbps
LTE	20.00 Mbps
HomePlug Green PHY	10.00 Mbps
G3 Standard	0.3 Mbps
Narrowband PRIME	0.3 Mbps

Cost per MB over a 10 year life cycle	
BPL PRIME	\$0.71
5G	N/A
LTE	\$4.65
HomePlug Green PHY	\$13.20
G3 Standard	\$68
Narrowband PRIME	\$68

¹ 5G will provide higher speed than LTE but poor coverage

Leading energy companies are starting mass deployments of BPL solutions based on PRIME standardization

EU Legislation mandates near real time data to enable decentralized grid with massive data requirements

This can only be achieved with broadband solutions

Directive (EU) 2019/944*

Article 15, Active customers

Member States shall ensure that active **customers are:**

... **entitled to sell self-generated electricity**, including through power purchase agreements

... **entitled to participate in flexibility schemes** and energy efficiency schemes;

Article 17, Demand response through aggregation

Member States shall allow and foster participation of demand response through aggregation.

Member States shall **allow final customers**, including those offering demand response through aggregation, **to participate alongside producers** in a non-discriminatory manner in all electricity markets.

Article 20: Functionalities of smart metering systems

Non-validated **near real-time consumption data** shall also be made easily and securely available to final customers at no additional cost, through a standardised interface or through remote access, in order to support automated energy efficiency programmes, demand response and other services;

* (Emphasis added)

Overview of the Corinex validated end-to-end energy solution

EnergyGrid Products

The world’s only BPL products validated in utility and vehicle-to-grid operations

Corinex CORE Firmware

Highest level security and smart-grid capabilities integrated into industry-standard semiconductors

GridValue Software

Enterprise-class network management software capable of managing millions of IoT devices

Corinex solution can scale up to five million nodes on a single software platform, capable of managing country-wide deployments

Residential

Data collection

50

Nodes per typical street installation

Grid

Energy info collection & transmission

250

Nodes managed by 1 substation node

Data Center

Network management & analysis

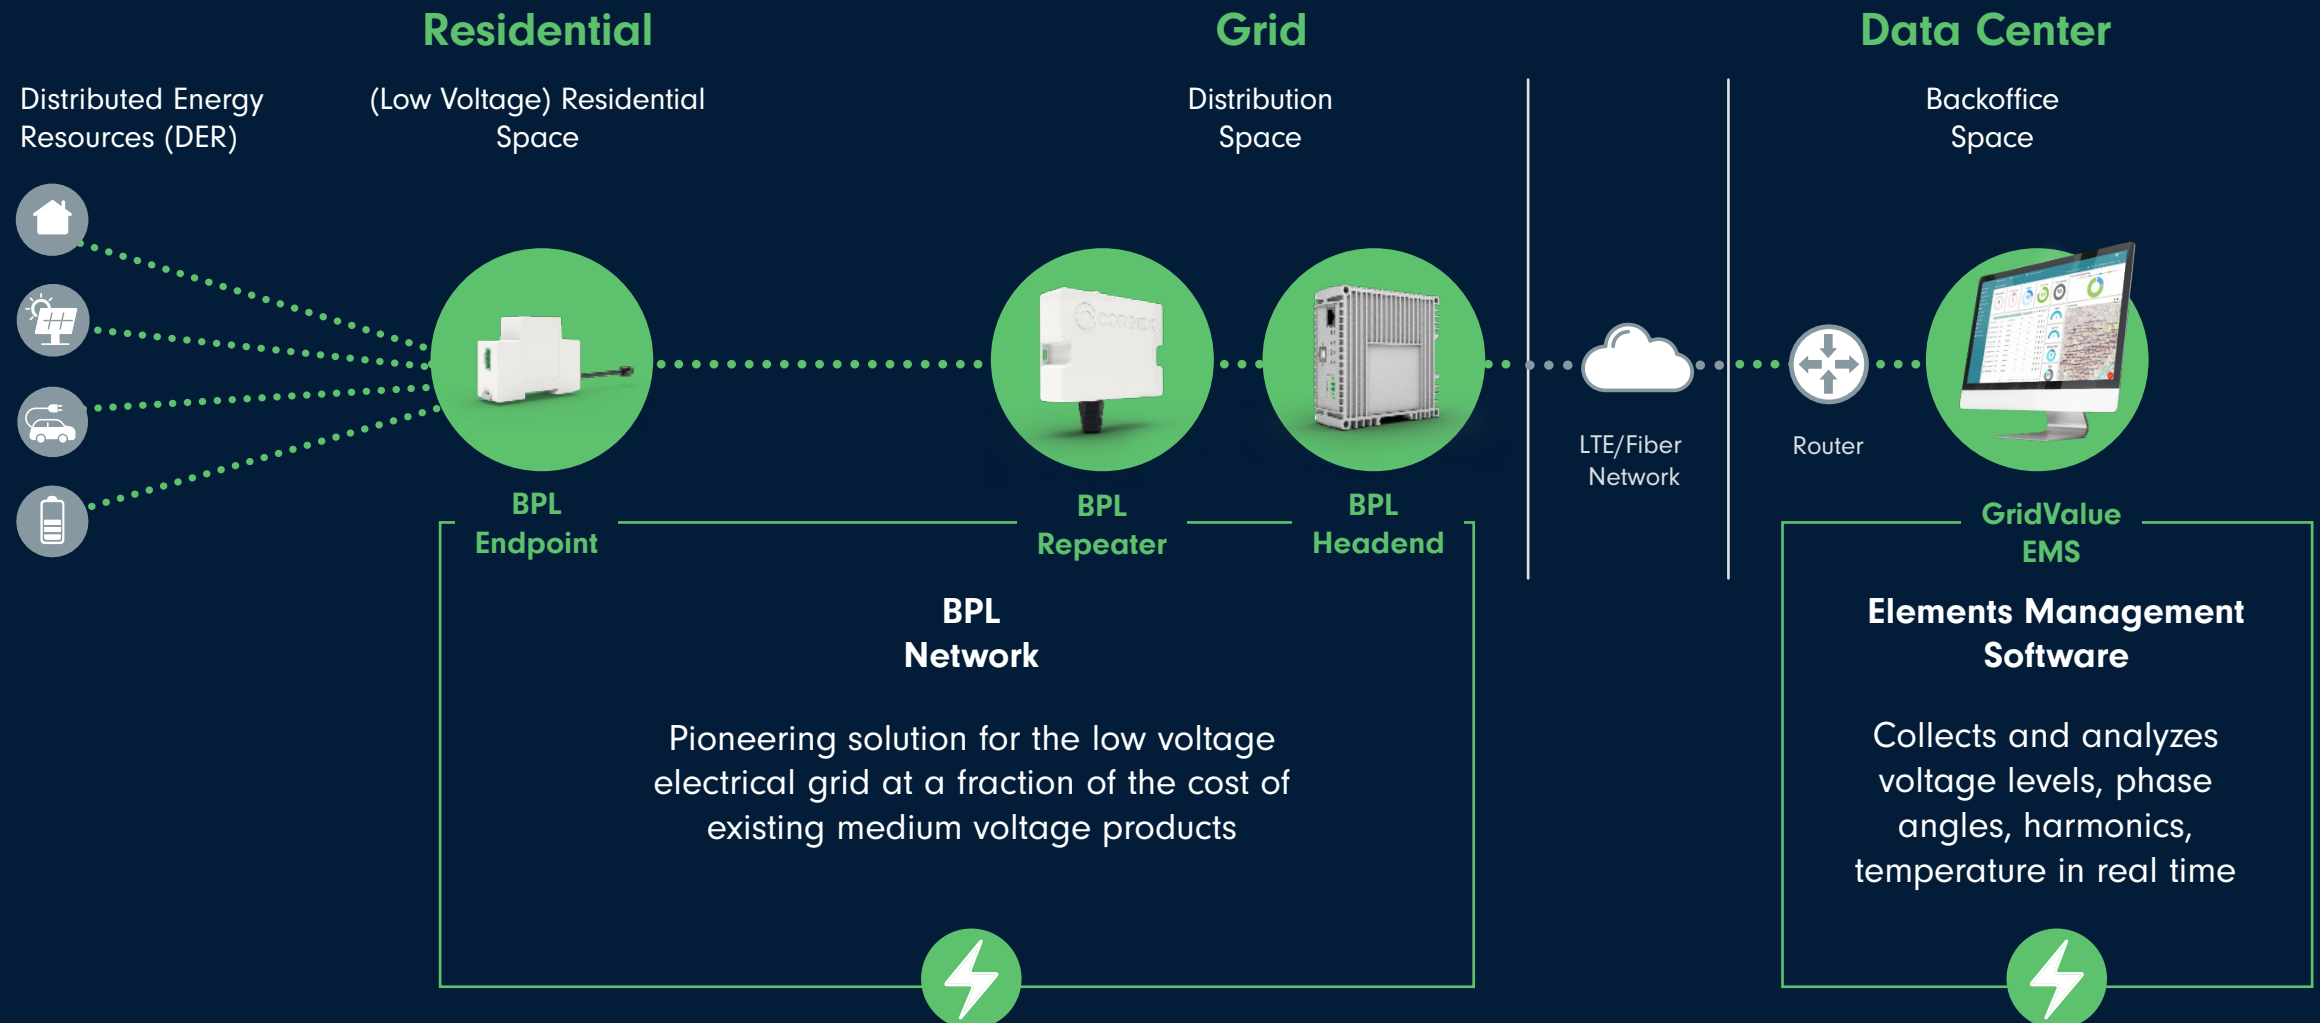

5,000,000

Nodes managed by 1 software platform

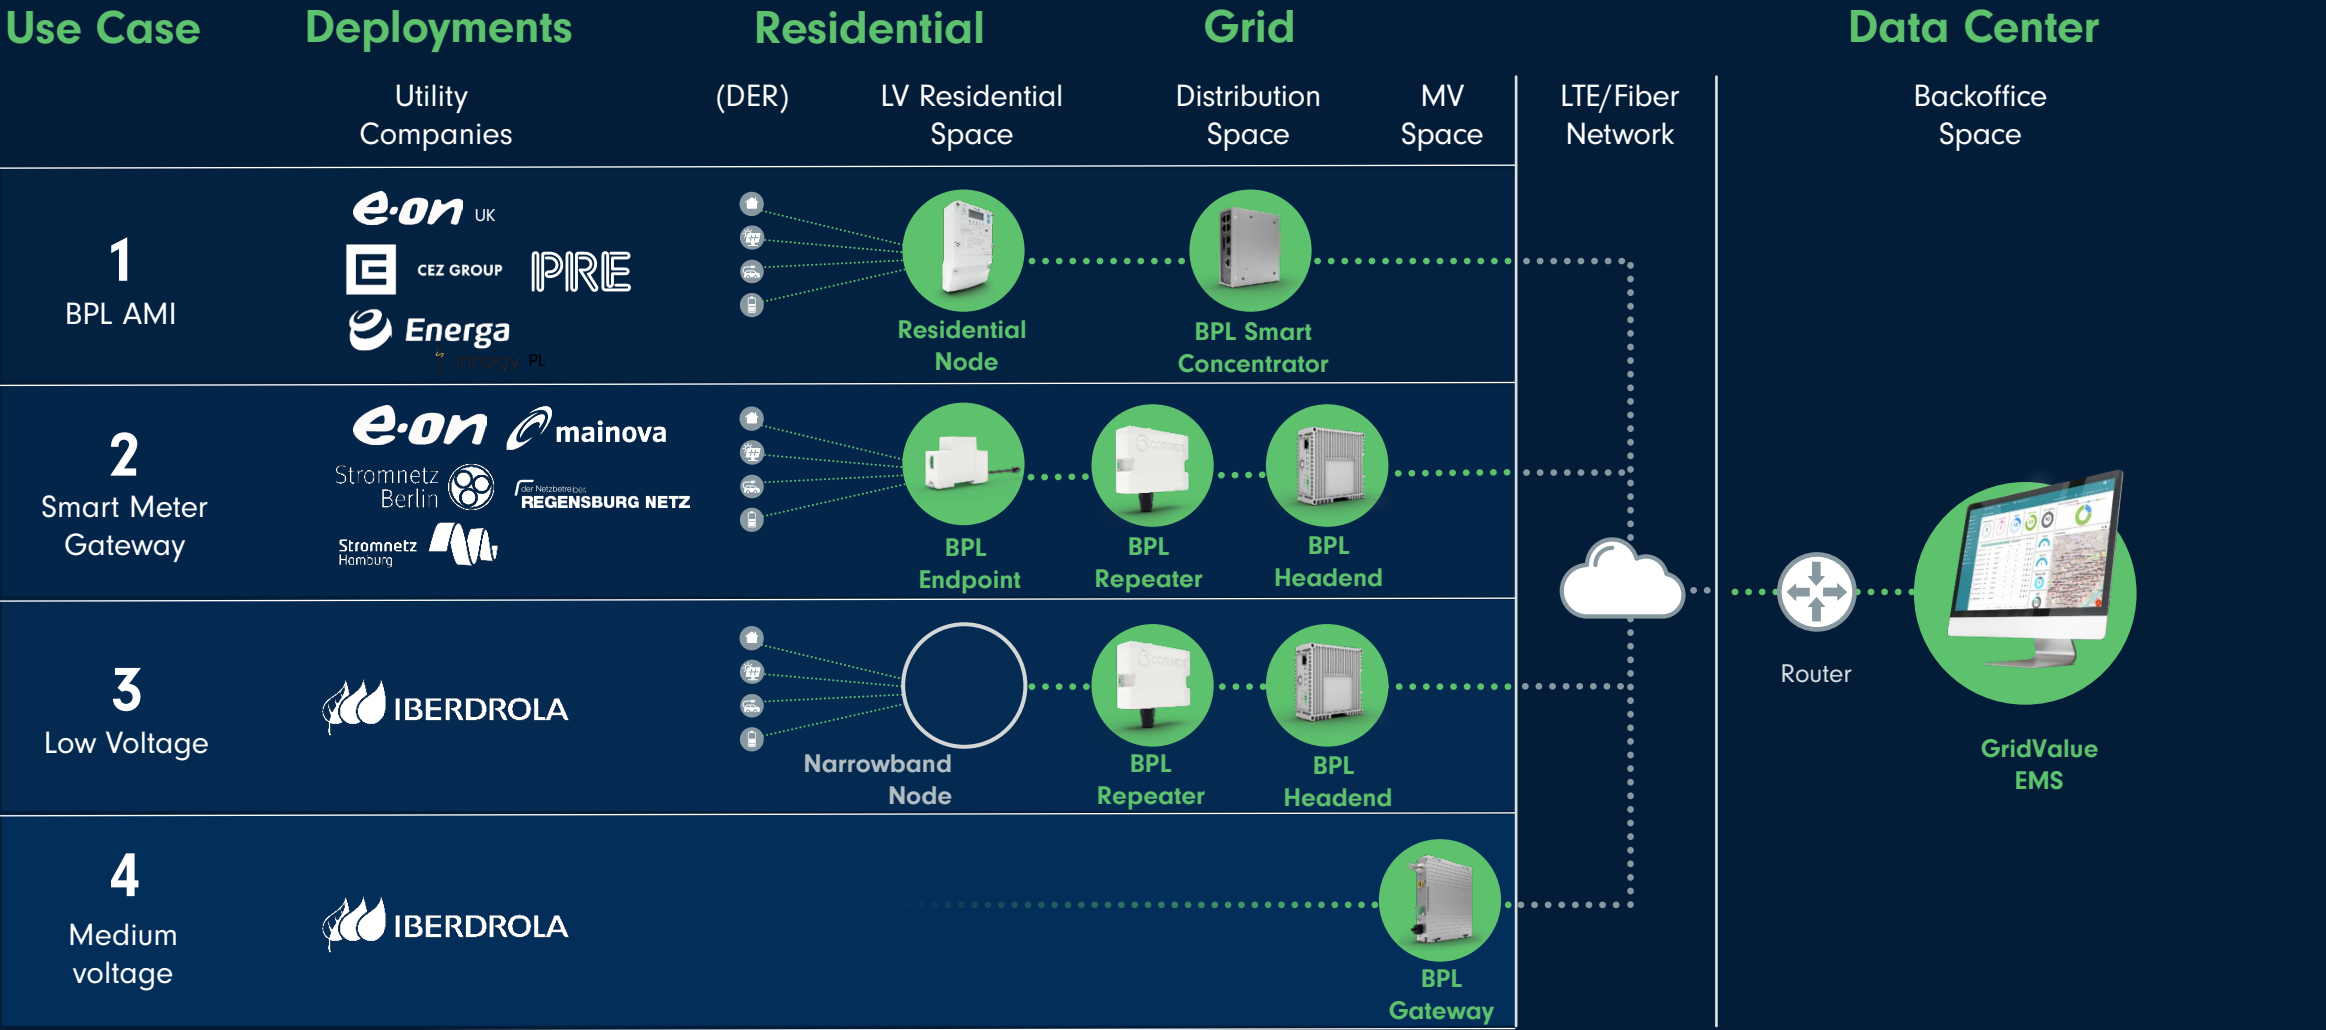

Number of nodes are based on smart meter gateway (use case 2) solution

The solution monitors real-time electricity parameters, which is necessary to create a new energy ecosystem

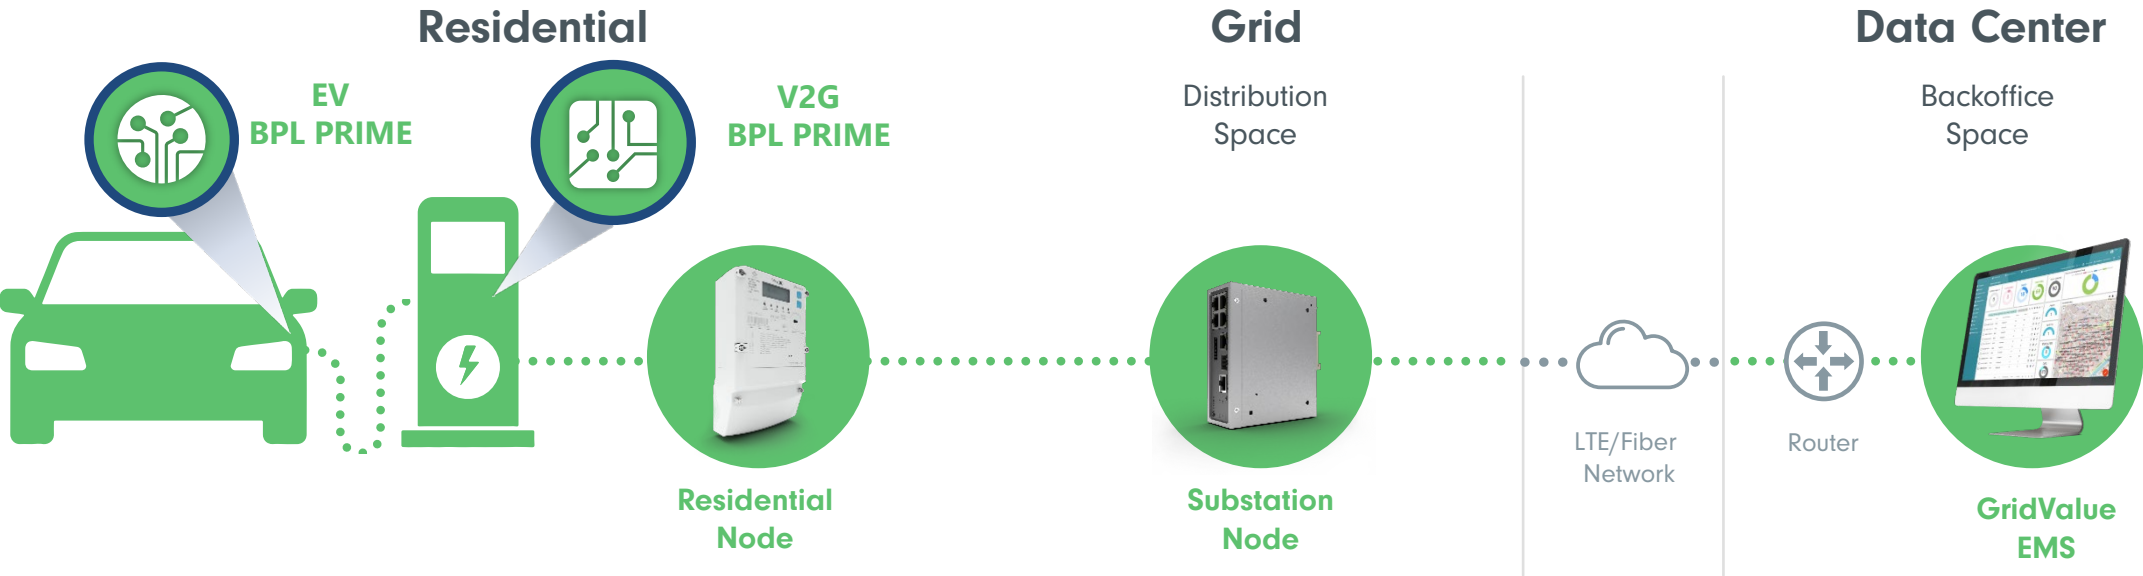

Corinex solution is being successfully deployed in all four key utility use cases

CORINEX

Prime Alliance is adding a BPL solution to integrate energy companies and EVs in use cases #5 and #6

5 Harmonized V2G Solution		Corinex validated in EU vehicle-to-grid test project	
6 BPL EV Charger Solution		Corinex being deployed in pilot EV charger project	

The V2G solutions bring benefits for each player in the V2G ecosystem, enlarging the market for BPL technology

V2G Network

EV customer applications

Connect using BPL at speeds of up to 1 Gbps, during charging

Keeps EV systems up to date for customer convenience and safety

Link to multiple vehicles in residential applications

Encrypted secure link with PKI authentication to avoid theft and fraud

GridValue EMS IoT Software

Monitors charging status for up to 5,000,000 electrical vehicles

Processes 2 million transactions per minute per server

200,000 concurrent (D)TLS tunneling support

Processes more than 1,000 events per second per server

Energy distributor applications

Provides, for each charging vehicle and charging station: location, estimated time required to charge, actual time and duration of charging, price, identity of utility or other energy service provider

Identify other EVs in the grid

Vehicle-to-vehicle (V2V) communication

Corinex solutions have been validated and deployed in mass rollouts

Management team with unmatched domain expertise

Founder & CEO
Peter Sobotka, PhD

Founding member of IEEE 1901 Group; Chairman of BPL Task Force, PRIME Alliance

CTO
Sam Shi

Represents Canada and Corinex at ITU and PRIME Alliance
Co-author of 12 key patents in BPL industry

Sales VP
Jana Gottstein

Sales Leader - Data Intelligence at SAP
Gartner, SAS institute

Senior Director Technology
Ali Inan, PhD

Former CTO/VP of EFR, (E.ON, EnBW, MVV company), leading metering digitalization at Siemens
Co-founder and initiator of the DLMS User Association

Senior Director
John Huang

Product Line Management – Sierra Wireless
20+ years leading successful engineering teams

Senior Director Strategic Accounts
Wolfgang Heiler

Head of Project Delivery at PPC
20+ years in BPL responsible for all worldwide projects

CSO Germany
Stefan Heyn

Managing Director at Canadian Solar
20+ years in Cleantech

Director Strategy & Marketing
Jan Sobotka

Entrepreneur & Designer
Leader of international design-projects, featured in Venice Biennale and Royal Academy of Arts

Advisory Board Member
Dan J. Cohrs, PhD

Former CFO: D-Wave, Rentech, Global Crossing

Advisory Board Member
Tom Ligocki

Founder & CEO of Clevest Solutions

Advisory Board Member
Enrique Ochoa Reza, PhD

Former CEO: CFE, Mexico's nation-wide utility
