### **Global Changes That Affect All Applications**

---

#### **Case: 55155 Institutional Definition Rule Report**

Created a new 'Institutional Definition Rule Report' under the Institutional Definitions menu. This report allows users to view and export setup information for multiple institutional definitions at once.

#### **Case: 55182 Institutional Combination Definition Rule report**

Created a new 'Institutional Combo Definition Rule Report' under the Institutional Definitions menu. This report allows users to view and export setup information for multiple institutional definitions at once.

#### **Case: 55248 Control row height of Excel export by application specific setting**

In the past we had a global Configuration Setting (5105) that would control the row height in pixels of every Excel export in every application. This was causing problems with application specific Configuration Settings (5011) to control the font size were different in each application. We've removed setting 5105 and instead are now automatically determining the row height based on the application specific font size.

#### **Case: 55360 Form Viewer - Tie pinned report to form template**

You can now tie a pinned report to a form template, thereby creating a more efficient and streamlined process.

#### **Case: 55836 Edit My Tabs changes**

We've hidden the Enable checkbox for the Filter Options tab on Edit My Tabs to prevent errors from happening when it's hidden by mistake.

#### **Case: 56180 Add Notes to User/Role Assignment Audit Log**

Added the Notes column to the User/Role Assignment Audit Log report.
