Economic
Perspective

The U.S. economy expanded at a 6.7% annual pace from April through June and will likely mark the high point for the economy's expansion this year. During the first half of the year, the economy was boosted by vast federal support in the form of trillions of dollars in individual stimulus payments, expanded unemployment aid and help for small businesses. Now, with those programs winding down or having already expired and with the delta variant's spread having discouraged some people from flying, shopping and eating out, most economists believe growth slowed in the July-September period.

Economic Growth

Contributions to Percent Change in Real GDP (Annualized Q/Q % Change)

Source: U.S. Bureau of Economic Analysis (Reported quarterly)

The Federal Reserve had contended for months that a bout of high inflation this year would be short-lived. Yet the central bank has finally admitted that the reversal in inflation is going to take longer than it thought. The Fed raised its estimate of average inflation this year to 4.2% from 3.4%, using its preferred PCE inflation gauge. Just 10 months ago, the Fed was expecting inflation to average just 1.8% in 2021. A separate and more widely known inflation barometer, the consumer price index, shows inflation cresting at an even higher 5.3% yearly pace.

Inflation Outlook

Consumer Price Index (Core) and Personal Consumption Expenditures Price Index (Core) (Y/Y % Change)

Source: U.S. Bureau of Labor Statistics, U.S. Bureau of Economic Analysis (Reported monthly)

The U.S. LEI rose sharply in August and remains on a rapidly rising trajectory. While the Delta variant, alongside rising inflation fears, could create headwinds for labor markets and the consumer spending outlook in the near term, the trend in the LEI is consistent with robust economic growth in the remainder of the year. Real GDP growth for 2021 is expected to reach nearly 6.0 percent year-over-year, before easing to a still-robust 4.0 percent for 2022.

U.S. Economic Outlook

Leading Economic Index (Six-Month Moving Average of the Six-Month Rate of Change)

Source: Conference Board (Reported monthly)

The global manufacturing upturn was subdued by supply chain disruptions and material shortages in September. Although output growth accelerated for the first time in five months, it remained among the slowest during the current 15-month sequence of expansion. Supply constraints fed through to prices, leading to marked inflation of both input costs and factory gate selling prices. Of the 31 nations for which September data were available, 24 registered PMI readings above the 50. U.S. and European manufacturing dominated the top of the growth rankings. The weaker performances were generally seen in Asia.

Global Economic Outlook

Manufacturing Purchasing Managers Index (PMI) (A PMI over 50 represents growth in manufacturing)

Source: ISM, Markit

According to FactSet, the bottom-up target price for the S&P 500 over the next 12 months is 5051, which is 15% above the closing price of 4391. At the sector level, the Communication Services (18.0%) sector is expected to see the largest price increase, as this sector has the largest upside difference between the bottom-up target price and the closing price. On the other hand, the Financials (+7.8%) sector is expected to see the smallest price increase, as this sector has the smallest upside difference between the bottom-up target price and the closing price.

Corporate Profitability

S&P 500 Operating Earnings Per Share and Revenue Per Share Growth (Y/Y % Change)

Source: S&P Dow Jones Indices (Reported monthly)

Consumer confidence dropped in September as the spread of the Delta variant continued to dampen optimism. Concerns about the state of the economy and short-term growth prospects deepened, while spending intentions for homes, autos, and major appliances all retreated again. Consumer confidence is still high by historical levels, enough to support further growth in the near-term, but the Index has now fallen 19.6 points from the recent peak of 128.9 reached in June. These back-to-back declines suggest consumers have grown more cautious and are likely to curtail spending going forward.

There's a well-known economic theory – the law of supply and demand – that explains what's happening with prices in the real estate market. Put simply, when demand for an item is high, prices rise. When the supply of the item increases, prices fall. Of course, when demand is very high and supply is very low, prices can rise significantly. Recent buyer and seller activity data from the National Association of Realtors (NAR) shows that buyer demand continues to outpace seller activity by a wide margin. As a result, five major entities that closely follow the real estate market forecast home prices appreciate at 5% through 2022.

The U.S. added 194,000 jobs in September. But focusing on a single number may serve only as a guidepost along a journey that has been anything but normal. After shedding 22 million jobs in last year, more than 18 million jobs have been restored. However, the churn has obscured the broader trend of disruption in the job market. A complex set of trends reflecting the country's changing demographics, governmental policies, technological change and a reevaluation of the contract between employer and employee has brought about the tightest labor market of modern times. A trend that will not unwind soon.

Economic Indicator Descriptions

Real Gross Domestic Product (GDP): GDP is a basic measure of U.S. economic output adjusted for inflation. Alternatively, it can be thought of as the final value of all goods and services produced within the U.S. Positive GDP growth signals an expanding economy.

Consumer Price Index (CPI): Measuring the change in the CPI provides an estimate for inflation. The CPI tracks the price of a basket of consumer goods and services. High inflation or deflation (negative inflation) can be signs of economic worry. CPI is typically reported in two ways: headline and core CPI. Headline CPI includes all categories that comprise the CPI basket of goods and services.

Personal Consumption Expenditure Chain-type Price Index (PCEPI): Measuring the change in the PCEPI provides an estimate for inflation. In comparison to CPI, which uses one set of expenditure weights for several years, this index uses expenditure data from the current period and the preceding period. This price index method assumes that the consumer has substituted from goods whose prices are rising to goods whose prices are stable or falling. Core PCEPI, which is closely monitored by the Fed, strips out the more volatile Food and Energy categories.

Conference Board Index of Leading Economic Indicators (LEI): The LEI is designed to signal peaks and troughs in the business cycle. The ten components include: average weekly manufacturing hours; average weekly initial claims for unemployment insurance; manufacturers' new orders for consumer goods and materials; ISM® Index of New Orders; manufacturers' new orders for nondefense capital goods excluding aircraft orders; building permits for new private housing units; stock prices of 500 common stocks; Leading Credit Index™; interest rate spread on 10-year Treasury bonds less federal funds and average consumer expectations for business conditions.

The Institute for Supply Management (ISM) PMI Index: The PMI is a composite index of five "sub-indicators", which are extracted through surveys to purchasing managers from around the country. The five sub-indexes are: Production, New orders, Supplier deliveries, Inventories and Employment level. An Index value over 50 indicates expansion; below 50 indicates contraction.

The Institute for Supply Management (ISM) Non-manufacturing Index (NMI): The NMI is a composite index of four "sub-indicators", which are extracted through surveys to purchasing managers. The four sub-indexes: Business activity, New orders, Employment, Supplier deliveries. An Index value over 50 indicates expansion; below 50 indicates contraction.

Consumer Confidence Index (CCI): The Consumer Confidence Index is a well-known proxy for the attitudes of U.S. consumer towards the business climate, personal finances and spending. This index attempts to measure the confidence that consumers have in the overall economy. This is important because consumer spending accounts for a large portion of U.S. GDP.

Consumer Sentiment Index (MCSI): The MCSI uses telephone surveys to gather information on consumer expectations regarding the overall economy. The MCSI is becoming more useful for investors because it gives a monthly snapshot of whether consumers feel like spending money by accessing their views on the business climate, personal finance, and spending in order to judge their level of optimism/pessimism. This is important because consumer spending accounts for a large portion of U.S. GDP.

Disposable Personal Income per Capita (DPI): DPI is the amount of money that households have available for spending and saving after income taxes have been accounted for. DPI is monitored to gauge the overall state of the economy.

Personal Consumption Expenditures (PCE): PCE consists of the actual and imputed expenditures of households including durables, non-durables and services.

Retail Sales: The retail sales report captures in-store sales as well as catalog and other out-of-store sales. The report also breaks down sales figures into groups such as food and beverages, clothing, and autos. The results are often presented two ways: with and without auto sales being counted, because their high sticker price can add extra volatility to the data.

Housing Affordability Index (HAI): Published monthly by the National Association of Realtors, the HAI index has a value of 100 when the median-income family has sufficient income to purchase a median-priced existing home. A higher index number indicates that more households can afford to purchase a home.

Unemployment Rate: Calculated monthly by the Bureau of Labor Statistics, the unemployment rate is a gauge of the health of the U.S. labor market. High unemployment can stifle the growth of the economy.

Wage Growth: Calculated quarterly by the Bureau of Labor Statistics, the employment cost index measures the growth of employee compensation (wages and benefits). The index is based on a survey of employer payrolls in the final month of each quarter. The index tracks movement in the cost of labor, including wages, fringe benefits and bonuses for employees at all levels of a company. We are using the wage component of this index.

Benchmark Descriptions

U.S. Aggregate Bond: The Barclays U.S. Aggregate Bond Index measures the performance of USD-denominated, SEC-registered, investment-grade, fixed-rate or step up, taxable bonds. The index includes bonds from the Treasury, Government-Related, Corporate and MBS, ABS, and CMBS sectors. Securities included in the index must have at least one year until final maturity.

U.S. Treasury: The Barclays Capital U.S. Treasury Index measures the performance of public obligations of the U.S. Treasury with a remaining maturity of one year or more.

U.S. Agency: The Barclays Capital U.S. Agency Bond Index measures the performance of the agency sector of the U.S. government bond market and is comprised of investment-grade USD-denominated debentures issued by government and government-related agencies, including FNMA. The index includes both callable and non-callable securities that are publicly issued by U.S. government agencies, quasi-federal corporations, and corporate and foreign debt guaranteed by the U.S. government.

U.S. Corporate: The Barclays Capital U.S. Corporate Bond Index measures the performance of publicly issued USD-denominated corporate and Yankee debentures and secured notes that meet specified maturity, liquidity, and quality requirements.

U.S. MBS: The Barclays Capital U.S. Mortgage Backed Securities Index measures the performance of mortgage-backed pass-through securities of Ginnie Mae (GNMA), Fannie Mae (FNMA), and Freddie Mac (FHLMC).

U.S. Municipal Bond: The Barclays Capital Municipal Bond Index measures the performance of the USD-denominated, investment grade, fixed-rate tax exempt bond market. The index has four main sectors: state and local general obligation bonds, revenue bonds, insured bonds and pre-refunded bonds. Securities included in the index must have at least one year until final maturity.

General Obligation Bond Index: The Barclays General Obligation Bond Index measures the average market-weighted performance of general obligations securities that have been issued in the last five years with maturities greater than one year.

Revenue Bond Index: The Barclays Revenue Bond Index measures the average market-weighted performance of revenue backed securities that have been issued in the last five years with maturities greater than one year.

Investment Style: Performance of different types of stocks will vary over time. A common way to characterize a stock is by market capitalization (e.g., large cap or small cap) or style (e.g., value or growth).

Large Cap vs. Small Cap: Large companies tend to be more established companies and therefore exhibit lower volatility. Over an extended period of time, expected returns of small cap companies are often higher due to the risks associated with smaller, less established companies.

Value vs. Growth: Value companies typically trade at discount valuations and may pay a dividend. Growth companies are those that are experiencing greater earnings growth prospects.

Mega Cap: The Russell Top 50 Index measures the performance of the top 50 largest companies in the Russell 1000 Index, which represents approximately 40% of the total market capitalization of the Russell 1000 Index.

Large Cap: The Russell Top 200 Index measures the performance of the 200 largest companies in the Russell 1000 Index, which represents approximately 68% of the total market capitalization of the Russell 1000 Index.

Mid Cap: The Russell Midcap Index measures the performance of the 800 smallest companies in the Russell 1000 Index, which represent approximately 36% of the total market capitalization of the Russell 1000 Index.

Small Cap: The Russell 2000 Index measures the performance of the 2,000 smallest companies in the Russell 3000 Index, which represents approximately 8% of the total market capitalization of the Russell 3000 Index.

Large Cap Growth: The Russell 1000 Growth Index measures the performance of those Russell 1000 index companies with higher price-to-book ratios and higher forecasted growth values.

Large Cap Value: The Russell 1000 Value Index measures the performance of those Russell 1000 companies with lower price-to-book ratios and lower forecasted growth values.

Mid Cap Growth: The Russell Midcap Growth Index measures the performance of those Russell Midcap companies with higher price-to-book ratios and higher forecasted growth values.

Mid Cap Value: The Russell Midcap Value Index measures the performance of those Russell Midcap companies with lower price-to-book ratios and lower forecasted growth values.

Small Cap Growth: The Russell 2000 Growth Index measures the performance of those Russell 2000 Index companies with higher price-to-value ratios and higher forecasted growth values.

Small Cap Value: The Russell 2000 Value Index measures the performance of those Russell 2000 Index companies with lower price-to-book ratios and lower forecasted growth values.
