

MOBILE APP EVALUATION

Motivation

You have an app that may have some shortcomings or you want to review it for future development. A trained eye can uncover what features should be implemented or what framework should be used. Either way, we can evaluate your app for technical implementation.

What We Bring

20 years of experience with software architecture and custom software development projects for many of the world's largest enterprises have generated the expertise needed for PRODYNA to help you with your project. In the mobile sector a lot of apps have been developed and published. In combination with the different fields, we can analyze any app for its architecture, communication and maintainability.

What You Need

You should provide us with the existing application and the related documentation. We need access to the source code and if possible to a test system. If you want to evaluate future developments, a description of the new functions is also needed.

What You Get

We will analyze your app technically and create a report featuring the most important parts. You will receive an analysis and recommendation for:

- UX and design (optional)
- Framework and architecture
- CI/CD pipelines
- Data security
 - App tracking
 - Push notifications
- Outlook on future development (optional)

About PRODYNA

PRODYNA is an innovative IT consultancy specializing in the creation of custom software solutions and serving the needs of corporate enterprises across the European continent. PRODYNA is a Microsoft Gold Partner, Kubernetes Certified Service Provider, Kubernetes Training Partner, and a member of the Cloud Native Computing Foundation.

Duration

5 days

Benefits

- No mobile expertise needed on your side
- Clear image of your current app
- Simple way of app assessment
- Preparation for future development
