FLUTTER PROJECT SETUP

Motivation

Setting up entire projects and new frameworks can be difficult, therefore it is good to have a helping hand. Tailored to your requirements and systems, we set up the basic project and accompany the pipeline from the repository to delivery in the app stores or web.

What We Bring

20 years of experience with software architecture and custom software development projects for many of the world's largest companies have generated the expertise PRODYNA needs to help you with your project. Many apps have been developed and released in the mobile space. Recently, native development's expertise has been extended to Flutter as well. Thus, we have a solid foundation in the major mobile frameworks to help you when needed.

What You Need

- Existing source code, if any
- Pipeline system (e.g. Jenkins, Github Actions, ...)
- Artifactory (can be created by us)
- App store keys and secrets (can be created by us)

What You Get

We will create the entire setup and infrastructure for you:

- Entire setup of the project to start developing
- Flutter project with latest version (or fitting to your requirements)
- Pipeline setup for different environments (typically: DEV, TST, PROD)
  - Different apps per environment
  - Apps put into artifactory
- Optional: Repository and artifcatory setup
- Optional: App tracking setup
- Optional: Notification setup (Firebase)
