

Security tools used by businesses today create massive quantities of data and surface too many alerts for analysts to effectively manage. With the cyber security industry facing a skills shortage, overworked and under-resourced teams urgently need augmentation.

Cyber AI Analyst was built to uplift security teams from low-level work and optimize threat investigation.

Human Expertise at Machine Speed and Scale

Cyber AI Analyst leverages insights collected from Darktrace's world-class experts over years of threat investigation to make highly accurate decisions.

It can sift through large volumes of data at speed and scale, augmenting human teams and buying back time to focus on strategic work.

Its investigations piece together disparate anomalies across different areas of the digital landscape, before establishing whether these individual anomalies are benign or part of a wider, significant security incident.

In this way, AI Analyst automates the initial triaging process usually undertaken by human teams, reducing investigation time by up to 92%.

Comprehensive protection across the digital ecosystem:

Streamline Incident Reporting

Cyber AI Analyst presents its findings in a digestible, human understandable security narrative, that outlines all the relevant stages of the attack lifecycle, as well as its own investigation process. It makes reporting a simple, low-friction process – even when it's a complex incident that needs to be shared with executives, board members, or even legal authorities.

Cyber AI Analyst has added real value to my team. It is sophisticated, but the intelligence it gives us is clear and actionable – even my most inexperienced starters can use and learn from it on day one.

/ CISO, IT Management Services

Integrates with your Security Ecosystem

Cyber AI Analyst integrates with tools across your security stack, allowing investigations to be triggered from from third-party sources like CrowdStrike or Carbon Black. The rich context and insights of Incident Reports can additionally be exported to SIEM, SOAR, or ticketing systems to enhance your existing workflows.
