

# URINOX-10

Color Chart and Reading Time

Please note that the colors of the dry pads (i.e., before conducting the test) have no clinical significance and are not supposed to match the color key.

The strip is semi-quantitative, so the pad color may not match 100% with the color chart after testing. In such a case, find the closest color match to interpret the results

Certain foods, medications, and vitamins may produce colors that do not match the color key.
