Why do you feel so strongly connected to the subject of waste management? And why do you think it’s an important issue for Park?

AC Immune’s research activities generate a great deal of laboratory waste, for which the disposal channels are already well defined. We wanted to extend this to other waste, such as transport packaging and that generated by the community of staff and visitors (food & beverages).

Can you share an inspiring/good practice implemented within your company?

In March 2023 we set up Sagex collection in buildings B and G with the help of Goutte, which then makes compressed cores that will be used in Swisspor insulation panels for housing.

Advice you would give to other Park companies

My main advice would be to find out about all the existing solutions on the Innovation Park and communicate them to your staff so that as many people as possible feel involved.
