

First choice for your surgeries

The **DSI Sponge High-Density plugs** are used as haemostatic agents after tooth extractions and during oral surgery.

90 mg of Hydrolyzed Collagen in each plug

4 reasons to use Sponge HD

1. Safe and rapid haemostasis

- No risk of secondary bleeding
- Stabilisation of the blood clot
- Option of adding antibiotic protection for high-risk patients (e.g. smokers, diabetics, immunosuppressed)

3. Reliable bone regeneration

- A stable bony implant site is formed in a short period
- More predictable long-term success

2. Reduction of alveolar ridge atrophy

- Keeping the socket shape and maintenance of the sensitive vestibular lamella
- Volume stability of the alveolar
- Improvement of the aesthetic and functional long-term results

4. High user and patient satisfaction

- Easy to use, trim, manipulate
- Simplified treatment steps
- Higher patient comfort
- Excellent value for money
