

CONDO AVOIDS \$200,000 IN WATER DAMAGE WITH AlertAQ™

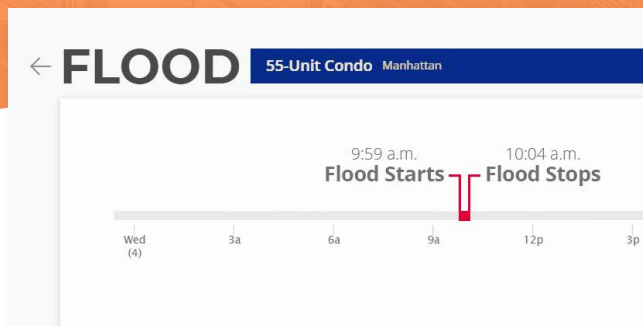

A 32-story, 55-unit condominium located in Manhattan installed Alert Labs flood detection solution to mitigate the risk of water damage.

Within weeks of installation, the Alert Labs sensors and platform sent a text message telling the maintenance team that there was a flood on the 10th floor in a homeowner's ensuite bathroom.

The facility manager on duty quickly responded and fixed the cause: a burst pipe under the sink. The condo avoided approximately \$200,000 in damage.

“The flood would have been disastrous because two units and a common area are directly below the unit with the burst pipe. We estimate about \$200k in damage was avoided.

- Property Manager

The AlertAQ water intelligence platform shows the start and stop time of the flood.

Add water damage prevention to your budget

A single flood could deplete reserve funds. Smart leak and flood solutions can help your buildings avoid unexpected repairs and major water damage expenses.
