

# LUXURY HOTEL UNDER CONSTRUCTION SAVES \$50,000

A mixed-use, 30-story hotel and condo in the North Eastern United States avoided major water damage when an Alert Labs sensor alerted maintenance teams to a leak.

“Thanks to the water leak phone call from AlertAQ™, the facility team was able to intervene and take corrective action promptly.

## Automated Water Leak Phone Call

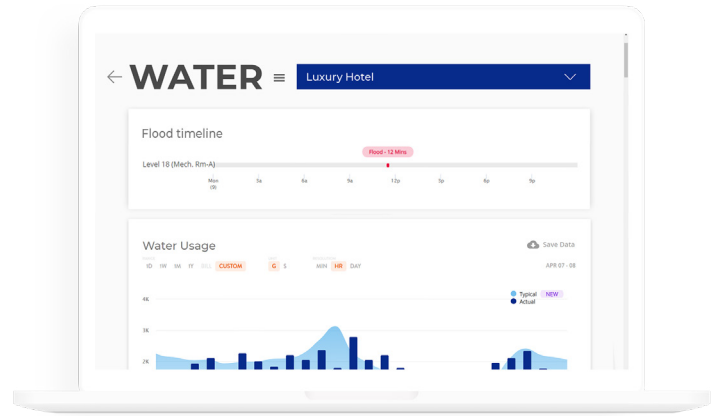

Crews were carrying out hydrostatic testing at the 300-unit hotel, which is in the final phases of construction, when some plumbing and a fitting began to leak. An Alert Labs water leak detector placed near the pipe triggered the AlertAQ™ water intelligence platform to send an automated phone call notifying the maintenance team of the location of the leak. Within minutes, the pipe was repaired and major water damage was avoided.

## Insurance Partner of Alert Labs

The hotel is a client of an investment and insurance company who partners with Alert Labs to provide insureds with smart water sensors and AlertAQ™ insights.

## Commercial-Grade Water Intelligence

Water intelligence provided by the AlertAQ™ water intelligence platform and the wireless, no-WiFi Alert Labs water sensors have helped save construction sites and other commercial buildings over \$50,000,000 in water damage and wasted water.

*The AlertAQ™ platform shows the start and stop time of the leak caused by the hydrostatic testing.*
