

Mat Adjustments Post Production

Size Modification Post Production (Rail Length)

For increase in size rails cannot be extended after the mat has been cut to size. A Vinyl filler can be added to accommodate gaps. For decrease in size the mat can be cut with a band saw with a bi-metal 18 blade or a circular saw with a carbide tip.

Size Modification Post Production (Traffic Direction)

For increase in size rails or a vinyl filler may be installed on an existing mat. For decrease in size rails may be removed and the vinyl filler cut.
