

SOLUTION BRIEF

Security may be the most critical area of your business, but it doesn't have to be the most challenging.

For most organizations, cybersecurity feels like a dark cloud looming over the business. With countless tools on the market, an industry filled with jargon, and an inevitable learning curve for IT teams, cybersecurity management feels less accessible, despite it being more critical than ever.

KEY CHALLENGES FOR SMBS (MORE THAN ANTI-VIRUS)

Any business with a customer-base is responsible for those customers' data. Think about all the sensitive information that exists in your email inbox alone: customer and employee information, proposals and contracts, and intellectual property and financial data.

To take it a step further, IT teams are already dealing with an overwhelming amount of data ingestion across an organization: O365, Cloud Resources, SaaS Applications, Endpoint, and so forth. In most cases, even seasoned IT professionals lack clear direction on what to do with the data, or how to convert the insights into an actionable plan.

Users, endpoints, and SaaS applications are the most targeted attack surfaces in organizations—especially small to medium businesses that lack the security tools enterprise companies have. Hackers are relentlessly accessing, transmitting, and stealing sensitive data, often leaving exposing exploitable vulnerabilities and weaknesses. Legacy tools provide IT teams with a series of disorganized snapshots, instead of a concise narrative, allowing cyber threats to sneak in.

While most companies have the basic security tools in place (like antivirus or endpoint detection), they lack the proper tools, resources, and talent to protect themselves across the entire threat landscape. Even with a healthy budget to hire an internal security team, there's a shortage of technical talent (to the tune of 4 million unfilled security jobs expected by 2024).

A SIMPLER, MORE AFFORDABLE WAY TO MANAGE SECURITY OPERATIONS

ContraForce delivers a radically simple security operations tool, designed specifically for SMBs. The platform provides around-the-clock threat detection and response, then verifies each threat so IT teams aren't sifting through insignificant alerts. ContraForce walks users through guided remediation steps so there's no learning curve on how to respond to threats. With incident report playbooks, users can resolve threats with a single click.

The platform integrates with an organization's existing tech stack, compiling the data from each tool into a single dashboard. With a holistic overview of your entire environment, users have increased visibility so data isn't overlooked or disaggregated. Further, with flexible and transparent pricing, businesses only pay for what they need. Pricing scales as the business does, and the Starter Plan for free, forever. No strings attached.

TECHNOLOGIES AND PLATFORMS SUPPORTED

- Microsoft Azure
- Amazon Web Services
- Google Cloud Platform
- Microsoft Defender for Endpoint, Identity, and Cloud
- Microsoft Office 365
- Endpoint Protection Platforms
- Cloud Security Posture Management
- Cloud Access Security Brokers
- Windows, Linux, Mac OS

CONTRAFORCE BUSINESS IMPACT

- One source of prioritized alerts: based on an expert alert schema to interpret data in a standard and meaningful way
- One consolidated view: Uncover events and the attack path across security layers
- One source for AI-threat hunting: Rapidly narrow scope, understand the impact, identify the path to resolution and respond rapidly.
- Lower Total Cost of Ownership (TCO): Reduce risk, costs, and improve operational efficiency with a centralized security stack without being a security experts
