

Simply Sustainable Energy Solutions Inc. prides itself as one of the leaders in energy management and sustainability consulting. SSES is a growing company based in the Greater Toronto Area excelling in conservation delivery services. Our experience in energy conservation services enables us to provide our clients with substantial returns and generates long term value. With over 20 years of experience with utilities, government institutions and consulting, our team knows the intricacies of the energy industry and can help you navigate through them.

Services

Energy Audits

ASHRAE Level 1: Consists of a site walk-through
ASHRAE Level 2: Consists of an Energy Survey and Analysis
ASHRAE Level 3: Consists of a Detailed Survey and Analysis

Utility Bill Metrics & Reporting

Analysis and reporting for facilities on a monthly basis.
This includes monitoring consumption of electricity, gas, water and waste.

Incentive Programs Support

Providing assistance in submitting energy/sustainability related applications for incentive programs including conducting the technical analysis as well as conducting M&V.

Energy Reporting (EWRB)

Reporting for customers on energy, water and waste as per Ontario Regulation 506/18.

Energy Monitoring Services

Providing customers with the ability to monitor their real-time energy consumption using IoT devices. This comes with an advanced dashboard for enhanced reporting and optimization.

Technical Review

Provide technical review of energy systems, equipment and evaluation on a program level.

Training and Workshops

We provide training and workshops for a number of energy and sustainability topics. Training and workshops in areas of Energy Management, Energy Modelling (NRCan's RETScreen Expert), Measurement & Verification, GHG Accounting, technical training (can suite the needs of the client)

Measurement & Verification (M&V)

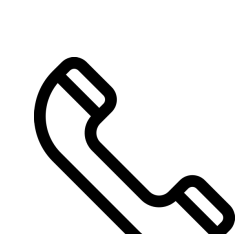

Planning, measuring, collecting and analyzing data for the purpose of verifying and reporting energy savings within an individual facility resulting from the implementation of Energy Conservation Measures (ECMs).

Sustainability and Energy Plan Development

Creating energy and/or sustainability master plans for building owners, municipalities and other organizations. Outlining the present, short-term and long-term goals for the organization and a plan to achieve the goals.
