

TOURETTE SYNDROME (TS)

A LITTLE-KNOWN SYNDROME!

Although little known in Belgium, the syndrome is widespread and affects 1 in 100 children. It has the same prevalence as autism and the people living with this condition are often very challenged.

It is time to react!

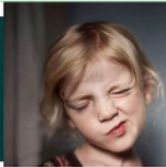

A CARD FOR + FREEDOM

A condition that results in...

- Involuntary sounds (throat clearing, sniffing),
- Repetitive uncontrollable movements (repeated blinking, shrugging of shoulders)
- Repetitive uncontrollable movements (blinking, shrugging shoulders)

We know an identity card will be an effective support...

Tourette syndrome (TS)
A neurological disorder

In the UK, 100% of users recommend it

"Even if you don't use it much, it gives you more confidence and I found I was going places I had previously avoided."

"Before, people thought I was making up an excuse or that it was a joke."

"When people look at me, I give a card and leave"

IKTIC VZW- JETIQUE ASBL

The association raises awareness of Tourette Syndrome (TS) in a positive and creative way and aims to reduce prejudice and misconceptions.

We facilitate the exchange of experiences, strengthen the social network and the autonomy of those affected.

Our association was founded in Flanders and has recently extended its activities to the whole of Belgium.

WHY A CARD?

Living with uncontrollable tics and facing the gaze and lack of understanding of those around you can sometimes be challenging and difficult to explain.

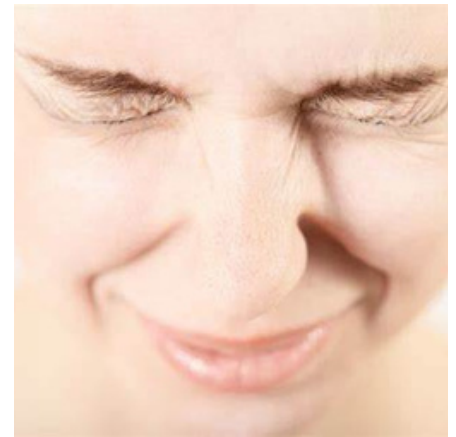

An identity card (already used in other countries) could be an effective tool to enable its holder to communicate easily and effectively about their condition. It can help show proof of their diagnosis should they need to and provides reassurance when in public places or certain situations.

THE ADVANTAGES

- Awareness, support and evidence of the diagnosis
- Simple and effective explanations about the condition
- Practical kit to keep in your wallet or bag
- Card with 25 explanatory cards to hand out when needed
