

SUSTAINABLE PLASTICS

only from A-Roo Company

In the early-2000s, A-Roo Company established a Green Team to examine company practices and explore new eco-friendly materials. Along with many other sustainable practices and packaging options, we are proud to bring to the market two LDPE films made from recycled plastics.

EarthWrap™

EarthWrap is a 1.6 mil* LDPE film. This plastic film contains 100% post-industrial recycled materials composed of 50% scrap from in-house production and 50% recycled materials from outside sources.

Sustainaplast™

Sustainaplast is a 1.2 mil* multi-layer LDPE film containing 25% post-consumer recycled materials and 25% post-industrial recycled materials, for a total of 50% recycled material content.

A few reasons to choose Sustainable Plastics:

- Reduce the amount of plastic that goes into landfills
- Recyclable at national grocery retailers (such as Kroger, Safeway, Target and Walmart) and many smaller retailers
- Invest in sustainability without sacrificing quality

EarthWrap and Sustainaplast films from A-Roo Company are both #4 recyclable. If you have questions about where to recycle, check with your local municipalities and trash collection companies for details. For more information about our sustainable plastics or other packaging options, contact an A-Roo Company Sales Representative.
