

Atlassian Cloud Enterprise:

Protecting your data and safety of your most mission-critical products.

How Atlassian Cloud Enterprise keeps your most precious data secure, especially for global customers in the most restrictive industries.

HIPPA | GDPR | EBA | BAFIN

Atlassian Cloud products have always been built with **industry-leading compliance frameworks** in mind. The next phase of Atlassian Cloud Enterprise provides security and data privacy capabilities compliant with region-specific regulatory standards.

Atlassian addresses evolving regulations

When customers rely on Atlassian to manage the safety of their mission-critical products, they are entrusting Atlassian with their brand equity and the privacy of their company and customer data. That's why Atlassian has devoted the time and resources to fortifying Cloud Enterprise products with region-specific, enterprise-grade, industry-leading security requirements.

Atlassian has bolstered security and data privacy protocols to give their customers:

- ✓ Greater transparency in how data is stored, processed and secured.
- ✓ Access to audit and oversee capabilities to ensure they have the information to do their risk assessments.
- ✓ Improvements to breach notification processes that abides by the latest regulations.
- ✓ Increased commitment to the continuity of service in the event of bankruptcy or termination to ensure customers have adequate time to close out their obligations.

How Cloud Enterprise is built for financial services in EMEA

Financial services customers with operations in EMEA can feel confident that Atlassian Cloud Enterprise products address the compliance standards of some of the most stringent regions in the world, namely the European Banking Authority (EBA) and Bundesanstalt für Finanzdienstleistungsaufsicht (BaFin) in Germany.

Reach out to your local Solution Partner for an outlined comparison of Atlassian's compliance controls, and how they correspond specifically to **EBA**, **BaFin**, and **HIPAA**.

WHAT YOU NEED TO KNOW ABOUT THE LATEST GDPR RULING

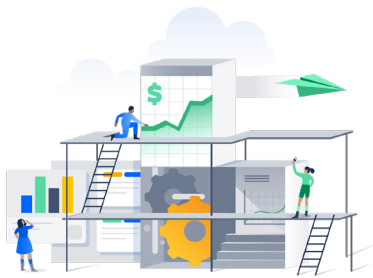

In an update to the Schrems II ruling last year, the Court of Justice of the European Union (CJEU) updated their guidance for Standard Contractual Clauses (SCCs), the mechanism in which companies providing services to European residents could transfer data from the EU to countries like the U.S in compliance with GDPR. In response, Atlassian has published new, compliant SCCs, which can be found within Atlassian's **Data Processing Addendum**.

NCR drives payment evolution with Atlassian

NCR, a global point of sale software provider with 36,000 employees, uses Atlassian Cloud products to keep all stakeholders in lockstep throughout strategic planning and daily execution to make sure they're hitting the mark on every dimension.

Take Atlassian customer, NCR, as a prime example of how sharing the compliance and security obligations with Atlassian has driven better business goals. Post-migration, Atlassian helped NCR accelerate their delivery timelines from every few months to every single day by providing an integrated solution that they could use across their organization that provided them with the security and compliance that their enterprise required.

“If you’re using cloud-based offerings, you can focus on your core competencies – instead of worrying about infrastructure or headcount – to manage this environment 24/7/365. All that stuff you can brush aside because [Atlassian] is magically managing it.”

ARTHUR MELOY,
VP of Innovation and Development
Transformation, NCR

And they’re not alone – **92 percent of Atlassian’s financial services customers say the move to Cloud cut admin time by 11 percent.**

Cloud Enterprise supports healthcare customers through HIPAA

In addition to regulation in financial services, Atlassian Enterprise also complies with the precedents outlined in the HIPAA Security, Privacy, and Breach Notification Rules, supplying you with a safe and secure environment for you to conduct your business with peace of mind.

What is the Health Insurance Portability and Accountability Act (HIPAA)?

The Health Insurance Portability and Accountability Act (HIPAA) is a regulation developed by the U.S. Department of Health and Human Services and is designed to protect the privacy and security of people’s protected health information (PHI). HIPAA applies to healthcare providers who electronically transmit health information in connection with certain transactions, health plans, and healthcare clearinghouses, as well as other third parties, known as “business associates”, that create, receive, maintain, or transmit PHI on behalf of covered entities.

Atlassian Enterprise provides comprehensive privacy and security protections that enable Cloud customers to operate Atlassian products in compliance with HIPAA.

These include:

- Security measures for protecting PHI.
- Assessments for reasonable remediation or mitigating controls of addressable HIPAA Security Rules.
- An annual HIPAA Security Attestation, Gap Assessment, and Security Risk Analysis.
- The regular review and retention of HIPAA Security policies and procedures.
- Security awareness content regarding the protection of ePHI and the designation and role definition of a HIPAA Security Officer.

Customers who are subject to HIPAA compliance and want to partner with Atlassian must purchase an Enterprise Plan and enter into a Business Associate Agreement (BAA) that covers the applicable products and services. For more information on the signed BAA, please contact your local Solution Partner.

Additionally, Atlassian has created a [HIPAA Implementation Guide](#) that customers will need to read before inputting any data. This will ensure each customer uses Cloud products and services in a HIPAA-compliant way.

For more detailed information on the steps Atlassian taken to meet each of the requirements defined by HIPAA, please visit the [Atlassian Trust Center](#).

Future investments

Atlassian continues to double down on its commitment to bolster security and compliance programs in Atlassian Cloud to ensure that its policies maintain the integrity of the financial sector and consumer data. Atlassian plans to expand its compliance program to address US- and Australia-specific standards for Atlassian financial services customers. [To stay on-top of the latest for Atlassian Cloud, check out the roadmap.](#)
