

FIT TESTING “TRAIN THE TRAINER” TRAINING

Program Overview: This course is for those individuals in the workplace who are tasked with the responsibility of fit testing workers whether that the workplace is industrial, a construction setting or in health care. If workers wear their respirators improperly, it may cost them their life. An improper fit can expose a worker to deadly materials, chemicals and viruses. The improper fit gives a false sense of protection, when in actuality the worker is NOT protected at all.

Therefore, it is very important that individuals doing fit testing for the workplace are properly trained.

This course provides those tools whether the required fit testing is Qualitative or Quantitative.

Training Content:

- Train the Trainer materials provided to the participant – includes hardcopies of all materials and a USB with all materials in electronic format.
- Review of the Fit Testing Materials – those provided to the TTT participant(s) (ppts, video, templates, exercises, etc.)
- In depth review of the Fit Testing Equipment – Qualitative or Quantitative based on the workplace needs and requirements

Course Duration: Four (4) hours dependent upon the number of participants.
