

Integration Suite

WebTMA's Integration Suite offering gives maintenance teams the ability to **maximize their output by leveraging a combination of APIs and Universal Interfaces.**

Universal Interfaces

WebTMA's Universal Interfaces provide out of the box integration capabilities. These UIs allow the use of established data mappings to and from the WebTMA application, which interfaces with SQL tables, flat files, and web services. Simplify overall integration efforts with standard connection points for enterprise data and use little to no IT resources from your organization.

Platform APIs

TMA's RESTful Platform APIs give users ultimate flexibility and security to integrate WebTMA's data with other systems. APIs are a seamless way for two software programs to communicate using specific web protocols and standards to connect over a network. Create custom integration workflows with Third Party systems or your own internal integrations, choosing the data you retrieve, and submitting data through the WebTMA API, all while respecting overall data integrity.

With TMA's Integration Suite packages, users can choose the package that best fits their current needs and can scale with their organization. The packages are configured to provide maximum compatibility, interoperability, and enterprise-wide information management. Bringing complex technologies together, facilities teams gain end-to-end visibility and consolidated management of their operations and increased overall organizational efficiency.

API + UI

Integration Suite –
APIs and one
Universal Interface

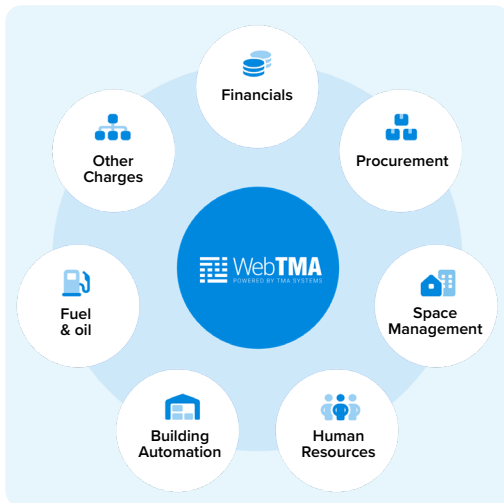

API + 2 UIs

Integration Suite –
APIs and two
Universal Interfaces

API + unlimited UIs

Integration Suite –

Universal Interfaces

THE BENEFITS OF Universal Interfaces

-  **Seamless connectivity** across your operations
-  **Accurate, real-time maintenance** data exchange between platforms
-  **Scalable packages** to choose integrations and APIs to fit your specific needs
-  **Enterprise-wide reporting** to enhance visibility across Operations
-  **Eliminate manual and erroneous** data entry with integration tools
-  **Accelerate workflows** with user-defined templates and configurations for your enterprise systems

THE BENEFITS OF Platform APIs

-  **Integrate with or without** TMA developer assistance
-  **Flexibility to integrate and build APIs** using different technologies and protocols
-  **Ease of use** with simple interface
-  **More straightforward documentation** for quicker operability
-  **Lightweight and efficient** for maximum performance with focused functionality
-  **Built-in advanced security features** and protocols, like token-based authenticity and SSL encryption
