

MIMOSA Diagnostics Announces Health Canada Approval

MIMOSA Diagnostics receives Health Canada approval for the MIMOSA Pro imaging device.

TORONTO/HALIFAX, CANADA, January 26, 2023 – For immediate release

MIMOSA Diagnostics Inc. announced today Health Canada approval for the MIMOSA Pro, a Class II handheld tissue imaging device and data platform. The MIMOSA team is pleased to make the made-in-Canada device available to clinicians and their patients here at home, in Canada. We are proudly Canadian and excited to deliver technology to help save the limbs and lives of Canadians.

The MIMOSA Pro skin imaging platform enables early and accurate assessment of a wide range of skin injuries including wounds, pressure injuries, burns, and more. MIMOSA's proprietary technology captures tissue oximetry, thermal, and digital images in less than one second without requiring patient contact. These images are securely uploaded to an accompanying web portal for remote patient monitoring and clinician collaboration to support improved patient outcomes.

Dr. Karen Cross, one of MIMOSA's Founders and CEO commented "I am so incredibly proud that the MIMOSA Pro can now be used to help our own communities right here in Canada. Having been a Plastic and Reconstructive Surgeon in the Canadian healthcare system, I cannot tell you how many times I wish technology like this was available to my team and my patients. To say that is a reality today, is truly a dream come true."

Dr. Tracey Rickards of the University of New Brunswick had the opportunity to use the MIMOSA Pro within her Healthy Seniors project which aimed to support rural seniors living with lower extremity injuries. When asked to comment on MIMOSA's latest milestone, Dr. Rickards said, "The MIMOSA Pro elevated the quality of care we provided, empowered our patients, and fostered collaboration among healthcare specialists within the Healthy Seniors Project. I firmly believe this technology has the potential to reshape the landscape of healthcare delivery, particularly for rural, older adults, and cannot wait to see the impact it has in Canada as a whole."

About MIMOSA Diagnostics:

MIMOSA Diagnostics Inc. is a leading provider of intuitive, equitable, and accessible healthcare technology. Their flagship product, the MIMOSA Pro is a pocket-sized imaging device that streamlines tissue health assessments for clinicians by capturing tissue oxygenation, temperature, and digital images in less than one second. The images are uploaded to a secure web portal where clinicians can monitor patient progress, identify early opportunities for intervention, and collaborate towards improved patient outcomes.
