

NEARSHORE ADAPTIVE VIDEO

Introducing Low Bandwidth Real-Time Video

NEARSHORE's NEW Low Bandwidth Real-Time video is a game-changer, an innovation that will shape the future of communications at sea.

Our mission is to drive excellence and safety for your vessel and crew in REAL-TIME so you can have smarter operations onboard with real high-definition video over low bandwidth, with significant cost savings.

Connectivity like never before

Nearshore ultra-low Bandwidth Real-Time Video enables connectivity at sea for:

Operation activity
monitoring

ROV
Communications

Situational
communications

Virtual reality
servicing

Catch
monitoring

Crew & client
conferencing

Health
and Safety

Delivering Results to Our Customers

Every day more and more companies are looking to protect their vessels, cargo, and crew while in open waters. That's why the adoption of Low Bandwidth Real-Time Video plays a vital part in security and safety.

It's Easy to Switch to NEARSHORE Low Bandwidth Real-Time Video!

We can enable any existing cameras aboard your Vessel, ROV, Security, or Conferencing System to accomplish your goals securely and affordably.

We can also provide new systems, including a fully managed service aboard new builds or refits.

NEARSHORE Adaptive Video integrates a wearable solution from RealWear

- Excellent low light video capture performance
- Output for a still image capture
- Enhanced image stabilization

SCHEDULE A DEMO TODAY

It will be the most impressive you have ever seen.

NEARSHORE'S proprietary video compression technologies provide real-time transmission protocols, ensuring the most reliable and low latency delivery of streams, even across low bitrate and congested networks.

Finally, the video challenge has been solved. Our Ultra-low Bandwidth video product will provide live video, audio, and data streams for real-time viewing, control, and processing.

Let's talk.

It's time to Optimize to Real-Time Intelligence by switching to Ultra-low Bandwidth video.
