

2023 ANNUAL REPORT

OF THE

FARMINGTON RIVER WATERSHED ASSOCIATION

Protecting and preserving the natural resources of the Farmington River Watershed through **research, education, stewardship, and advocacy** - for you, for all, forever

2023 BROUGHT HIGHS AND (F)LOWS

Compared to last years drought conditions, this year's rainfall was historic. In June we were about normal for rainfall but by August, we were experiencing 40% more rain than normal. This translated to swollen tributaries, the river reaching bankfull and flood stages, and reports of erosion. Flooding is the most common natural disaster in the US and 41 million Americans are at risk from flooding.

Goodwin Dam had lots of water in the spillway due to historic rains combined with MDC's lack of releasing water from their 10 BG water storage in Colebrook River Lake Reservoir due to contract negotiations between MDC and USACE.

FRWA was lucky to be at the table to assist with the effort to protect MDC's Colebrook Reservoir Lands. In July 2023, MDC signed an agreement to sell a conservation easement for 5,500 acres of MDC's Colebrook Reservoir lands to Northwest Connecticut Land Conservancy if the Connecticut DPH approves MDC's abandonment permit application. This is a historic win for the Farmington River Community as it preserves those 5,500 acres as forested habitat and preserves the watershed with the same protections that drinking water reservoirs across the state have.

Goodwin Dam spillway in action after historic rainfalls in 2023

Executive Director Aimee Petras speaking at the press conference regarding the agreement between MDC and NCLC

REMEMBERING DAVID SINISH

FRWA mourns and remembers David Sinish, who we sadly lost this past June. For more than 40 years David championed the Farmington River. Many accomplishments of the FRWA would not have happened without his vision, guidance, deep knowledge, and understanding of the river. His generosity, gentle spirit, sense of humor, and persistent advocacy made him a wonderful conservation partner. The impact David Sinish had on the river and watershed was profound and will continue to inspire us.

WATER QUALITY MONITORING OF 2023

Bacteria Monitoring

From June through September, FRWA staff, interns, and one volunteer monitored 59 sites for *E.coli*. There are 17 sites in Massachusetts and 42 in Connecticut, spanning the entire watershed. We extend our gratitude to the Town of Simsbury's Water Pollution Control Authority for allowing us to utilize their lab to analyze our samples.

Summer Interns learning how to take bacteria samples

Water Temperature

FRWA installed 3 new temperature loggers in Massachusetts, to accompany work being done with our Berkshire Clean, Cold, and Connected (BCCC) partnership. In Connecticut, 18 loggers were retrieved and 17 were redeployed throughout the Farmington River and its tributaries.

FRWA Staff deploying a conductivity logger in Becket, MA

Chloride / Conductivity Research

FRWA continued to sample 24 sites throughout CT for chloride, in partnership with the Izaak Walton League of America's Salt Watch program. Based on the data gathered, FRWA decided to expand the chloride program to include continuous conductivity loggers in 8 CT sites and 2 MA sites with potential to reach toxic levels of chloride.

Stream Crossing Assessments

FRWA has been busy working away at stream crossings in Sandisfield, Becket, and Otis for the BCCC partnership in MA. All crossing assessments in Sandisfield have been completed, with the final 80 having been assessed in 2023. FRWA completed 47 assessments in Becket, and we are prepping to continue this work through the winter. In CT, a total of 53 crossings were completed in Barkhamsted, Bloomfield, Canton, Granby, Hartland, and Windsor.

Aquatic Insect Sampling

This fall, FRWA has trained 28 volunteers to assist in assessment of streams following the CT DEEP RBV (Riffle Bioassessment for Volunteers) Protocol. Using aquatic macroinvertebrate assessments, CT DEEP is able to identify high quality stream habitats. FRWA has submitted 10 samples to CT DEEP, and the results will be published in an annual report.

FRWA and McLean Game Refuge interns sorting aquatic insects

MONITORING IN 2023

Bacteria Sites: **59**
Bacteria Samples Analyzed: **354**
Bacteria QC Samples Analyzed: **144**
Chloride Sites: **24**
Chloride Samples Analyzed: **202**
Conductivity Logger Sites: **10**
Temperature Logger Sites: **23**
2023 Temp Data Points: **138,192**
Stream Crossings Assessed: **175**

Cyanobacteria Research

FRWA has once again monitored for cyanobacteria blooms in Rainbow Reservoir in Windsor, thanks to funding from an Aquatic Invasive Species grant from CT DEEP and assistance from LFSWS. Due to large amounts of precipitation and flooding on the river this summer, there was no bloom. However, data gathered suggests that it is possible for a bloom to occur again. Harmful Algal Blooms (HAB's) have been reported on Rainbow Reservoir in 2019, 2020, and 2022. Blooms occur in July and August, and they pose a health risk to people, pets and wildlife.

COMMUNITY INVOLVEMENT ON THE RIVER

In the last year, FRWA has received incredible support and enthusiasm from our community across the watershed. We are so thankful for the hard work of our volunteers and members, who help us in our work to preserve and protect the Farmington River and its watershed; we could not do this without you all.

In 2023, we had our annual river clean-up, water chestnut removals on Barber Pond in Bloomfield, and volunteer trainings on aquatic insect populations. We participated in Canton's farmers market, Bloomfield's Summer Concert Series, the Burlington Fish Hatchery's 100th year anniversary celebration, and so much more that brought us closer to everyone in our watershed community.

FRWA continued the Water Wanderer's camp program with Environmental Learning Centers of CT, which brought a group of kids down to Long Island Sound to learn about the diverse habitats. FRWA also continued its partnership with Bristol Eastern High School, who participate in rain gardens plantings and upkeep, along with taking a trip to Project Oceanology where they learned about marine research on LIS, and got up close with some cool marine organisms. This summer, FRWA also hosted paddles with youth groups, including ELCCT and NAG, to get people out on the water and learning about our river.
