Our world is people powered, and centralized entities are increasingly using people's behavior and activity to problem solve, predict outcomes, and generate revenue. But while the power of people has been *realized*, it is rarely rewarded. Until now.

FORE Protocol has created a tokenized incentive economy to mobilize the wisdom of the crowd to problem solve at scale. In doing so, FORE Protocol utilizes a decentralized network of people to bridge the gap between the real world and the blockchain: forming the foundation for web3 solutions that remove friction from real world industries.

LAUNCHING SOON:

FORE PREDICT (a peer to peer predictions platform)

NEXT ON OUR ROADMAP:

FORE ORACLE (a crowd sourced decentralized oracle)

FORE SIGHT (a business intelligence application)

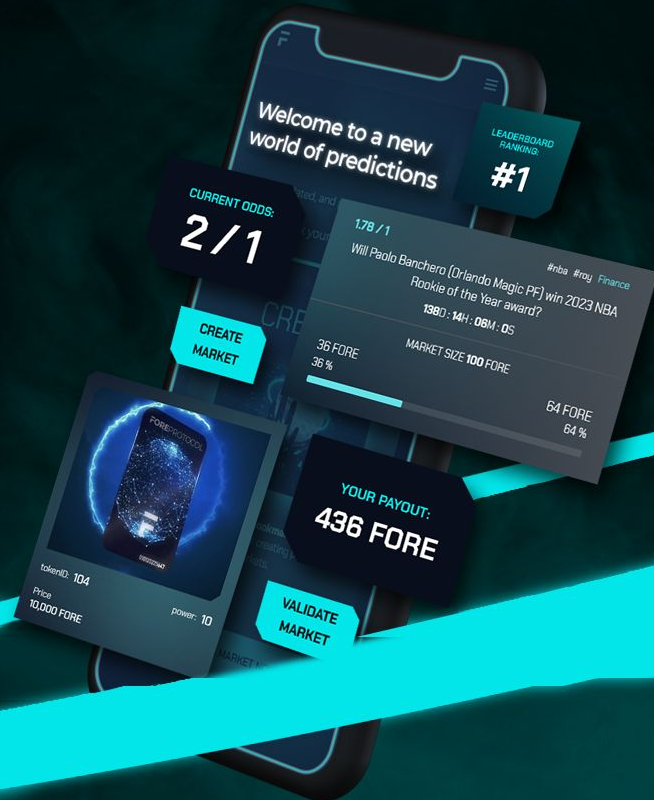

FORE AUDIT (crowdsourced financial auditing tool)

FORE WORK (HR management tool)

FOREPREDICT

The first decentralized application on FORE Protocol, **FORE Predict is a peer to peer predictions platform powered by people.** On FORE Predict, people create, participate in, and validate markets on any real world event: whether sports, crypto, current affairs, or beyond.

Why spend time and money on traditional prediction markets when they are set up to extract as much value from you as possible?

On FORE's people powered platform, everyone wins.

The concept of taking a position on the outcome of an event is not inherently bad—people have been doing so for thousands of years. But what is exploitative, and rightfully creates such negativity around the space, are the incentive structures that centralized entities utilize to ensure “the house always wins”. Whether its hidden fees, or predetermined odds that disadvantage the player, to halting payouts, they do everything they can to extract maximum value from users in whatever way possible.

And yet, people still want to take positions on the outcomes of events. **Despite a recession, the global online betting market reached \$80 billion last year, and is expected to reach \$134 billion by 2028.** FORE saw a huge opportunity here to disrupt an industry that has seen very little innovation over the years, and has ultimately built its success on the exploitation of users: we want to change that.

FORE exists to create a decentralized platform where users hold the power. Users retain ownership of their assets and are rewarded for their productive activity not just charged for the privilege. Users aren't playing against a house that always wants them to lose, but against other players, with market determined odds. And above all, FORE exists to create a people powered ecosystem, where people have the freedom to create, participate, and validate any markets on any events, and are rewarded for doing so through the redistribution of platform fees.

BECOME THE BOOKMAKER.

Earn rewards for creating interesting and unique prediction markets on anything from sports, to weather, to politics, and beyond. **Create a market and earn 0.5% of the total market size**, regardless of the outcome. The larger the market, the higher your rewards.

THE ODDS ARE IN YOUR FAVOR.

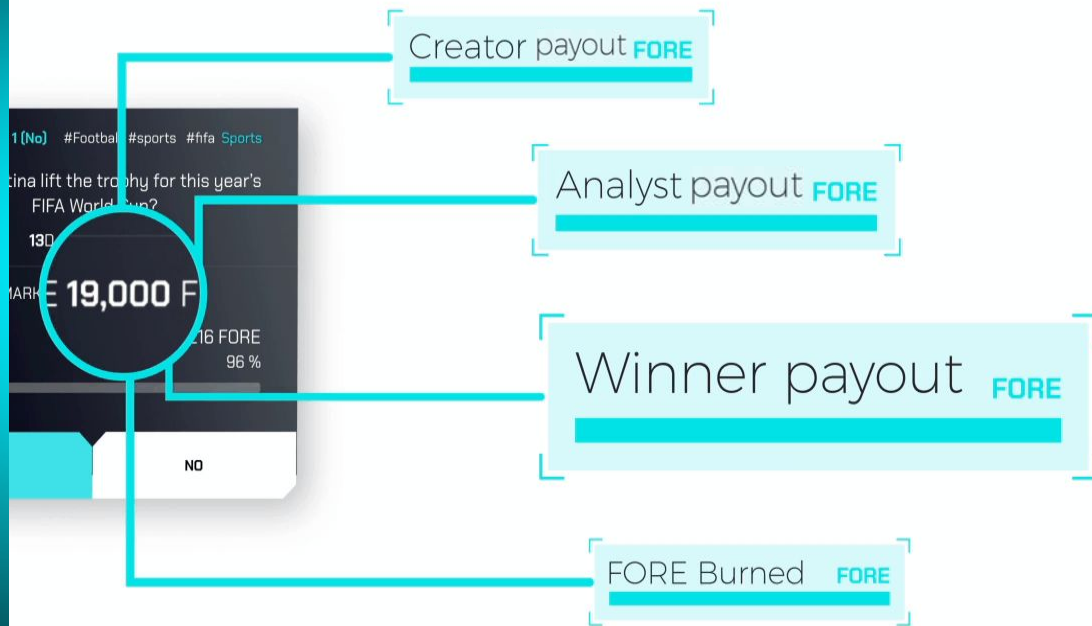

Take a position in any market on any event and enjoy market determined odds*, zero counterparty risk, incredibly low fees, and transparent and trustless market resolution. **There are no hidden fees with FORE**, and all activity is recorded on the blockchain for the utmost transparency.

YOU *DON'T* HAVE TO PLAY TO EARN.

Up to date with the results of your favorite team, but too risk averse to take a position? Earn rewards for simply confirming the outcome of a market. **2% of all markets are redistributed to accurate validators for confirming outcomes.**

People powered predictions means everyone wins.

Using FORE as the protocol's sole currency allows us to invert the incentive model of previous prediction markets and reward all participants in our ecosystem for productive activity in a sustainable way, without ever minting new tokens for rewards. Instead, a 5% maintenance fee is imposed on all market participation, which is then redistributed to users for productive activity on the protocol.

“LAUNCH FIRST, BUILD LATER” DOESN’T WORK.

Unlike most blockchain companies that come to market with nothing but an idea and a whitepaper, we bootstrapped development to build **FORE PREDICT** *entirely*. We have successfully completed our initial build phase and are currently preparing to launch our main net on November 30th.

WEBSITE

DOCUMENTATION

FORETECH

FORE Protocol is fundamentally a suite of tools built to facilitate community creation, participation, and validation of peer to peer markets on the blockchain.

CORE TECHNOLOGY.

BLOCKCHAIN.

While not a 'blockchain project', FORE is currently built on the Arbitrum blockchain for some of the lowest fees and fastest settlement in the market. With other chains already integrated, **FORE Protocol plans to become chain agnostic.**

The protocol leverages smart contracts and a robust token economy to ensure decentralized, trustless, and immutable payout of rewards to participants. This allows for the redistribution of fees to users to drive value for all participants, transparent market resolution, and a **truly decentralized predictions platform.**

PEER TO PEER.

In traditional prediction markets, the house always wins. But **with FORE's peer to peer platform, there is no house.** Users create markets, users participate against each other in markets, and users validate markets.

Payout is determined by smart contracts that require no human intervention to fulfill the terms of the contract. Unlike with traditional bookmakers, with FORE, odds are determined by market participation (the users themselves), fees and transactions are transparent, and **value is shared across all participants.**

NFTs.

FORE is the first prediction protocol leveraging non fungible tokens (NFTs) for **maximum value extraction for users.** When a user creates a market, they receive an NFT to represent their right to the appropriate creator rewards.

Additionally, users validate market results by holding an Analyst NFT, with claimable rewards directly proportional to the locked FORE within the NFT. Since value accrues directly to the owner of these NFTs, we created a **dynamic and liquid secondary market for these assets on our own NFT Marketplace.**

NFT VALIDATION.

In FORE Protocol's proprietary NFT validation model, a decentralized network of validators (or 'Analysts') perform the role of oracle by uploading the results from real world events to the protocol. **They act as the market's 'architects' and are responsible for verifying that a given outcome is accurate, and ensuring that all payouts are correctly executed.** In doing so, the protocol can "index" real world outcomes on any real world event (in much the same way Google indexes information) to create an infinitely scalable predictions protocol.

In order for a user to verify the outcome of a market, the user must hold or mint an Analyst NFT. To validate a market, the Analyst will 'vote' their NFT on an outcome, at which point the NFT is sent to the market contract address and the NFT will be locked until the reward phase.

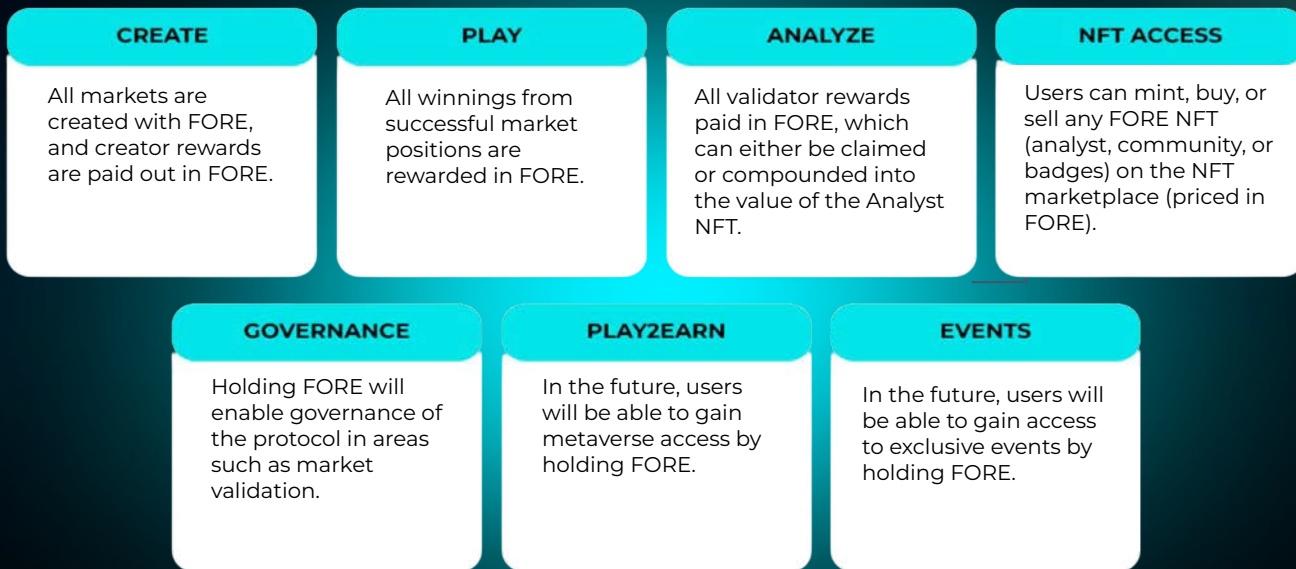

FORETOKEN

FORE's **hyper deflationary utility token** underpins all activity on the protocol. Using FORE as the protocol's sole currency allows us to invert the incentive model of previous prediction markets **redistributing fees to enable every participant to earn rewards for productive activity.**

FORE TOKEN: A TRUE UTILITY TOKEN.

A utility token is an asset that serves a use case within a specific ecosystem, allowing users to perform an action on a certain network. As more people use the product or service, the demand increases for the utility token. But many projects class their native asset as a utility token, without much utility to their token at all. **FORE is a true utility token in the sense that it is the sole currency and underpins all activity on the protocol, and will have utility from day one.**

HYPER DEFLATIONARY TOKENOMICS.

FORE's maximum supply is capped at 1B FORE, although the circulating supply will never come near that due to its deflationary nature.

A portion of all FORE tokens utilized on the protocol is removed from circulation forever: these tokens cannot ever be recovered or recreated.

As activity increases on the protocol, the total available supply to support that activity is proportionally declining. This ultimately leads to a shortage in the supply of FORE*.

*Determined via 500,000 monte carlo simulations.

THE DEFLATIONARY NATURE OF FORE IS DIRECTLY PROPORTIONAL TO ACTIVITY ON THE PROTOCOL. FORE is removed from circulation primarily via two mechanisms:

MARKET PARTICIPATION

1% of the value of all markets is permanently removed from supply.

NFT MINTING

A user must lock 1,000 FORE in order to mint an NFT. This is permanently removed from supply.

DISTRIBUTION SCHEDULE.

TYPE	TOKEN COUNT	%	VESTING
SEED ROUND	100,000,000	10%	5% on TGE, 9mo cliff; 12mo vesting

MERV MERZUG CEO + Co Founder

Merv has a deep history of leading, operating and investing in enterprises across their stages of evolution. Most recently, Merv worked as a private equity turnaround operating partner, where he led the successful restructuring of +\$1B in distressed debt transactions. He has also successfully led startups from ideation to commercialization to exit. Merv comes from notable institutions such as Bridgewater Associates, ADIA (Abu Dhabi's sovereign wealth fund), and SierraConstellation Partners. Merv attained his MBA from Kellogg School of Management at Northwestern University and is an avid Python developer.

ANDRÉS SORIANO COO + Co Founder

Andrés has built, scaled and led large organizations for over 15 years. Most recently, Andrés was a senior executive for a Fortune 500 company where he led organizational strategy and operations. He also led the company's expansion into several growth markets in Asia, acting as interim CEO and managing several thousand employees. Prior to his business career, Andres has completed several of the world's most difficult ocean crossings and record breaking attempts, such as the 2011/12 Volvo Ocean Round the World Race. Andrés earned his MBA and Masters in Negotiations + Dispute Resolution from Pepperdine University.

TIMOTHEA HORWELL CMO + Co Founder

With a decade in marketing strategy within the fintech sector (specializing in data, mobile, and payments), Timothea's current focus is building go to market strategies for web3 projects. Most recently as CMO of Orion Protocol, Timothea led one of the most successful token sales of 2020: responsible for community growth, user acquisition, and partnerships. Her worked helped place Orion within the top 100 market cap projects within just a year, at a \$2 billion ATH fully diluted market cap. Timothea continues to advise for a number of synergistic web3 projects across DeFi, GameFi, the metaverse, and NFTs.

We're a global team of executives, entrepreneurs, developers, data scientists, marketing strategists, and creatives hailing from Fortune 500 companies, DeFi projects, global ad agencies, and the largest hedge funds in the world. We share a collective focus on building incentive models to bring real world data to the blockchain. Over the past year, our team has grown from our three founders to over 20 people. In that time, one thing has remained constant: our values. We believe that if we focus on building a team with the right value system, we can iterate our way to success, build almost any product, and most importantly, we can build the necessary trust with our employees, partners, users, and community members.
