

# Stage roof water lily Gästival Lucerne

## Roofing made of a crystal clear PVC film

The floating platform "Water Lily" will dock at six different locations on Lake Lucerne during the summer months of 2015. Concerts and theatre events are performed on the unique construction. The light transparent roofing made of a crystal clear PVC film with belt reinforcements made of fabric strips with a diameter of 12.0 m serves as weather protection for the artists and spectators during the performances.
