NavvTrack® Selected by Major New York Health System to Track Large Fleet of iOS Devices

Ann Arbor, MI – Today marks a significant milestone as NavvTrack® iOS Fleet Management is being launched at a major public health system in New York. This module of the NavvTrack Care Traffic Control platform aims to transform the way hospitals and health systems track and manage their shared mobile iOS fleets, providing unprecedented efficiency, visibility, and control.

This leading healthcare provider recognized the importance of streamlined fleet management to ensure optimal patient care and operational excellence. With over 12,000 shared iPhones and iPads distributed across multiple facilities totaling over 10 million square feet, the need for an advanced tracking solution became imperative and the NavvTrack iOS Fleet Management module emerged as the definitive choice to meet these demanding requirements.

"We are thrilled to partner with this large public health system in New York," said Daniel Siegal, MD, CEO of Navv Systems on the recent selection on NavvTrack. "Our enterprise location services platform offers real-time visibility and control over each hospital's entire fleet of shared iOS devices, easing the burden of mobile technology management, and enabling teams to focus on quality patient care. This partnership represents a significant step forward in operational excellence for healthcare."

NavvTrack iOS Fleet Management provides an array of powerful features tailored specifically for the healthcare sector. With its intuitive and user-friendly interface, hospital mobility teams gain real-time location visibility for their shared iOS fleet, allowing them to efficiently find and locate lost or misplaced devices, manage utilization, and monitor battery life. Fully integrated into existing mobile device management (MDM) platforms, the system offers enhanced security features, such as "lost mode" allowing remote lock and data wiping capabilities, ensuring patient data and other PHI remains protected at all times.

As Navv Systems launches NavvTrack iOS Fleet Management, it signifies a transformative shift in healthcare technology. By empowering hospitals with unprecedented control and visibility over their shared mobile iOS fleets, NavvTrack is poised to enhance patient care, streamline operations, and protect healthcare's investment in mobile devices.

About Navv Systems, Inc.

Navv Systems, Inc. is an Ann Arbor, Michigan-based healthcare software and solution company that uses mapping and indoor positioning technologies to provide real-time location intelligence for healthcare's fast-paced and dynamic work environment.
