FLOOD PROTECTION MADE EASY

EASY DIY INSTALL & LOCKABLE

PREPARE FOR FLOODING BEFORE IT HAPPENS

Floods are among Earth's most common—and most destructive—natural hazards and worryingly it is a global upward trend.

Floods cause widespread devastation, uprooted lives, loss of life, physical injuries and damages to homes and businesses.

Between 1998 and 2017, floods affected more than 2 billion people worldwide and population growth, more intense rainfall and melting ice are likely to cause more frequent and severe floods.

DO YOU LIVE IN AREA THAT IS A RISK FOR FLOODING?

Flooding can happen for a multitude of reasons and here are the most common:

- Fluvial flooding – when rivers, lakes and other bodies of water overflow, either due to rainfall or drainage from the surrounding land. The number of people at risk of being forced from their homes by river flooding could surge to as many as 50 million a year by the end of the century.
- Coastal flooding – caused by storm surges associated with tropical cyclones and tsunamis.
- Surface water flooding (also known as pluvial flooding) – an occurrence that is hard to predict, this occurs when rainwater fails to drain away sufficiently.
- Sewer flooding – this takes place when sewers are blocked or overwhelmed by the water pouring in. This can cause the surrounding area to become contaminated, and is potentially very hazardous.
- Reservoir flooding – when a dam bursts and the contents of a reservoir cause damage to the surrounding area.
- Flash flooding- caused by rapid and excessive rainfall that raises water heights quickly, and rivers, streams, channels or roads may be overtaken.

2.3 BILLION PEOPLE HAVE BEEN AFFECTED BY FLOODING DISASTERS IN 20 YEARS

Floods have serious social and economic impacts on the properties and communities that are affected.

Flooding is estimated to result in annual damage costs of around £1 billion and in addition to the physical damage and economic impacts, floods can lead to long term stress long after the flood water has receded.

More investment in flood defences and improved planning for future disasters are urgently needed worldwide. Scientists predict that the number of extreme wet days – which have already increased this century – will continue to rise in the coming decades and will bring even greater devastation.

OUR SOLUTION- DAM EASY FLOOD BARRIER

Do you want a flood resistant, resilient and easy to use flood barrier to ensure you are prepared for the next flood in your area? Our product is practical and affordable and will help lower flood risk. It will ensure your home or business is more resilient and better protected if flooding occurs.

Installation is as easy and quick as 3 simple steps and then you have the ultimate flood barrier.

1. Place barrier within the door reveal.
2. Extend the sides out to meet the door reveal.
3. Use the pump to inflate the seal leaving the area water tight.

This product is so simple to use and we even have an installation video just in case there are any issues.

WHY IS THE DAM EASY FLOOD BARRIER THE ULTIMATE FLOOD BARRIER?

- The inflatable seal in our barrier provides complete protection around your door way when inflated.
- Unlike all of the other similar products in the market, the DAM Easy flood barrier requires no frames, silicone or add on.
- Our barriers extend from 780mm – 1100mm, which will cover your normal doorways such as front and back doors.
- For larger entrances such as patio doors & garages, multiple barriers can be connected together with the air of our extension pole.
- Each barrier reaches heights of 720mm.
- Secure your home in 5 minutes after the first warning of a flood.
- Simplicity- No building experience or knowledge required.

Floods don't wait, neither should you! Get your Dam Easy Flood Protection today!
