

31 LARGE SCRUBBER SYSTEMS

Tailored multimodal transport solution to meet the client's needs

Project details

Task: With a large diameter of almost 5,5 meters it was not feasible to transport the scrubber cargo from factory to delivery location by road. Therefore, a multimodal solution (trucking to port + reloading to a barge or deck carrier vessel) was chosen as the final transport method.

Route: Domestic transport from Qingdao to Shenzhen in China.

Cargo: Total 12 700 CBM, each scrubber with a diameter of 5,5 meters.
