

Restoration

What are your restoration goals?

Knowing what you want to achieve by planting natives will help you figure out where and what species to plant.

If you want to...

Connect habitat patches

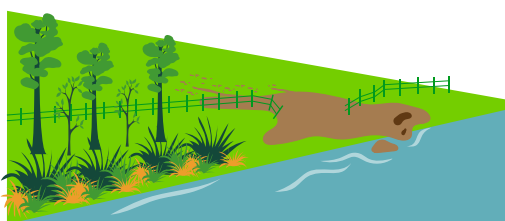

Tip: plant bush corridors

Create habitat for native species (e.g. food for birds)

Tip: plant species attractive to these animals

Reduce erosion

Tip: plant out steep land

Improve water quality

Tip: fence and plant along waterways

Retire unproductive land

Tip: plant species that can grow in these conditions

Top tip

Look at what native species are already growing in your area. This is a clue about what species grow well there.
