## Nymbl Empowers Crye Precision with a Digitized Manufacturing Process and Low Code Tools

*Nymbl helped Crye Precision Upgrade their Business Operations  
and Drive Efficiency with Customized Low Code Solutions*

#### PROBLEM

Crye Precision, a leading manufacturer of innovative tactical and performance gear for military and law enforcement agencies, was struggling with an outdated ERP system that hindered the efficiency and data quality of its manufacturing process.

The company needed a newer, more agile solution that could keep up with their fast-paced operations while enhancing their tracking and data capabilities. They sought a team that had expertise in both No Code/Low Code tools and NetSuite to help them migrate to the newer system while integrating it with their current low code tool.

#### SOLUTION

With the help of the Nymbl team, Crye Precision successfully converted from their old legacy ERP to Oracle's NetSuite using custom-built No Code /Low Code tools that improved their business operations, enabled easy tracking of manufacturing processes, and automated demand planning and shipping management processes. This saved the company huge amounts of time that could now be dedicated to creating better processes and expanding the business.

#### BENEFITS

Crye Precision was able to streamline its manufacturing process, improve data quality, and digitize its business operations to the next level. The custom-built tools created by Nymbl helped Crye Precision gain full control of its business operations, enhancing productivity and enabling better decision-making capabilities.

#### NYMBL'S IMPACT ON CRYE PRECISION

-  ERP Migration (Successful in 2 months on both budget and quality)
-  Automated demand planning
-  Manufacturing process tracking
-  Shipping management process automation
