

Sierras On The Lake

Edmonton, AB

Sierras on the Lake was developed to replace an older commercial development, which was no longer viable.

A plaza overlooking the beautiful Lake Beaumaris was incorporated into the design over the roof of the underground parking environment, providing a much used and appreciated amenity for the residents of the condominium.

The plaza is constructed of paving bricks over a membrane supported on a ten-inch thick concrete suspended slab. The plaza supports large concrete planters and landscape furniture for the enjoyment of the residents of the condominium.
