

DUAL INVESTMENT

Product Description

What is Dual Investment?

Dual investments are comparable to limit orders where an investor takes a position to buy or sell a digital asset (crypto) at a predetermined price (strike price) and timeframe (maturity date). The beauty about Dual Investment is that the trader also receives interest (yield) which is paid by the option buyer. The interest is determined by the volatility of the underlying asset and the maturity date, which is often annualized in APR terms.

Dual Investments typically allow you to exercise two investment strategies; buying assets at low, or selling them when it's high. Let's look at an example for each strategy.

Buying Low

This strategy is suitable for investors who wish to earn yield from their idle stablecoins, or to buy a desired crypto at a price below the current market price.

Let's assume ETH's current market price is \$1.3K. You expect the price will go down to \$1.2K in a week, so you decide to invest 6.5K USDT (~\$6.5K) with the following option strategy:

Principal	6,500 USDT
Strike Price	\$1,200
Tenor	7 days
APR	22%
Est. Yield (above strike price)	27.42 USDT
Est. Yield (below strike price)	0.0229 ETH

- ➡ If the market price remains **above** the strike price at maturity, then you will keep the USDT you invested and earn yield on it.

- ➡ If the market price is **below** the strike price at maturity, then your USDT will be converted to ETH at the strike price and earn yield in ETH.

Selling High

This strategy is suitable for investors who wish to earn yield from their idle crypto assets, or to sell their existing crypto at a higher price in the future.

Let's assume BTC's current market price is \$19K. You expect the price will reach \$20K in a month, so you decide to invest 0.342 BTC (~\$6.5K) with the following option strategy:

Principal	0.342 BTC
Strike Price	\$20,000
Tenor	30 days
APR	33%
Est. Yield (above strike price)	185.58 USDT
Est. Yield (below strike price)	0.0093 BTC

- ➡ If the market price is **above** the strike price at maturity, then your BTC will be converted to USDT at the strike price and earn yield in USDT.

- ➡ If the market price remains **below** the strike price at maturity, then you will keep your BTC you invested and earn yield on it.

Requirements:

- ✓ Complete our KYC verification process.
- ✓ Sign our Trade Agreement prior to exercising Dual Investment.
- ✓ Deposit a minimum of IDR 100,000,000 to start investing.

How do I get started?

- ➡ Contact our Sales team by scanning the QR code, and ask for our **Term Sheets**.
- ➡ Determine the strategy you want to engage in: **Buying Low**, or **Selling High**.
- ➡ Select the currencies you wish to trade:  **BTC**  **ETH**  **USDT**  **USDC**
- ➡ Determine your desired maturity date: **weekly** or **monthly**.
(settlements occur on Fridays)

Definitions

Digital Assets:	Virtual currencies that represent a value. Cryptocurrencies fall under this asset class.
Stablecoins:	A cryptocurrency that is typically pegged to a fiat currency (eg. USD) therefore considered relatively stable in price. Popular stablecoins are USDT and USDC.
Option Strategy:	A position that gives the trader the right to buy or sell digital assets which allows them to profit from movements of the underlying asset based on market price.
Implied Volatility:	A metric used to capture the market's forecast of the likelihood of price movements of an asset price.
Strike Price:	The predetermined price at which an option strategy can be exercised.
APR:	The annualized yield that the depositor receives when exercising options.
Settlement:	The amount you receive at maturity. The currency depends on how the market price compares to the strike price upon maturity.
Maturity Date:	The option expiration date, as well as the date that the option is exercised.
Tenor:	The length of time before an option expires. Often expressed in days.
Buy Low:	A limit order to buy a digital asset below its current trading price using stablecoins.
Sell High:	A limit order to sell your existing digital asset above its current trading price.
Terms Sheet:	An agreement outlining the basic terms and conditions under which the option will be exercised.

We Protect Your Funds

Your funds are guaranteed safe and secure. Our security protocol is designed to secure and protect your digital assets with institutional-grade multi-layer technology. We ensure your investment is stress free.

Risk Disclaimer

Investing in this product involves market risk. Changes in price, level or value of the underlying asset can be unpredictable, sudden and large in volume. Such changes may result in the price or value of the asset to move adversely to the interest of the investor and may negatively impact the return on investment. In extreme circumstances, the investor may lose all, or a significant proportion of the original investment.
