

Information Needed for a Simple Pump Quote

Depth of the Well

This is the measurement from the ground level all the way to the bottom of the well.

Static Water Level

The static water level is measured from the ground level down.

Position of the Current Pump

Measure from the ground level to the position of the submersible pump. The submersible pump is set deeper than the Simple Pump.

Well Diameter

Measure the inside diameter of the casing across the casing at the widest point.

If it is difficult to measure the inside diameter, measure around the casing for the casing circumference, just below the well cap. For accuracy, use a soft, cloth-type measuring tape.

Casing Rise Above Ground

Measure from the ground level to the rim of casing.
