Dear Clinicians,

Thank you for reading our Insight today.

Overcoming self-doubt: Clinicians as change agents

Dr. Ashley McClure, a devoted mother, experienced primary care physician, and delegate for the American Medical Association. Previously, she held the role of an alternate delegate for the American Medical Association. Nowadays, she stands as a co-founder of Climate Health Now, an organization that focuses on education and awareness about the impacts of climate change and its connection to public health.

Dr. McClure has been a primary care physician for over 12 years. She started her medical journey at Oregon Health and Science University in Portland, where she received her medical education. She then went on to complete her residency at the University of Colorado, where she became passionate about climate change and its effects on health.

Dr. McClure's journey beautifully chronicles her evolution from a conventional medical role to an active change agent, while fiercely confronting the climate crisis. The experience encapsulates the shift from a conventional medical role to an active change agent, while fiercely confronting the climate crisis.

Dr. McClure's story and contributions is crucial to our understanding of self-doubt and how it impacts the lives of others. Her story is a testament to your commitment and strength.

Dr. McClure's story is also a reminder that we all have the power to make a difference, no matter how big or small. It is normal to have moments of doubt, while we follow the inspiring story of a remarkable colleague, Dr. Ashley McClure.
