

# Making Cloud Native & Kubernetes simple.

Cuemby simplifies companies' cloud operations to enable growth and innovation, offering a secure and efficient platform for building applications. Our AI-powered model reduces tech complexity, increases developer productivity, and enhances platform security, resulting in faster time-to-market and cost reduction.

# Cuemby's Cloud Journey: A Pathway to Success

Redefining what Success means with every interaction.

# Reveal Engagement

Enhance your business with our comprehensive cloud computing diagnosis and advice.

Reveal

Advise

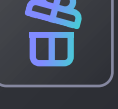

Plan

## Engage

Profile, Identify, and Invite.

## Reveal

Focused on gathering information, analyzing it, and providing some key recommendations in a report.

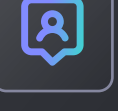

## Advise

Focused on high level proposals, demo/PoC/PoV, and initial scoping.

## Plan

Focused on strategic planning, work prioritization, resource identification, and final scoping.

## Advisory Services

We will walk with you as your resources or vendors execute the strategic plan to verify adherence with the spirit of the plan.

## Professional Services

Cuemby provides options for services to support the remediation projects as identified thru the Reveal process, as well as strategic partnerships to apply.

## Let us help you take your business to the next level

with our comprehensive cloud computing and associated resources diagnosis and advice

## People

When diagnosing general points, we look at the following technological elements:

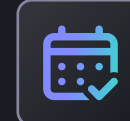

**Reviewing IT governance and management processes** (e.g., software development, change control, configuration management) to ensure they are adequate.

**Determining if the organization has the necessary IT resources and capabilities** to provide adequate internal support and offerings.

Ensuring that any significant license, maintenance and/or warranty agreements **are up-to-date and comply with the terms of the agreement.**

**Checking whether the underlying hardware is up-to-date**, not obsolete, and is not near its capacity, to avoid the need for significant capital investment.

**Examining the software and hardware architecture** to ensure it can support effective scalability for growth.

**Investigating if there are significant processes that require manual intervention**, which could inhibit the ability to scale and affect the accuracy of reports.

**Examining internal systems** to see if they are redundant or duplicated.

## Process

Topics we address in the Process pillar

## Reveal

The Reveal phase is focused on gathering information, analyzing it, and providing some key data in a report format utilized in the subsequent Advise step.

## Advise

The Advise phase turns the data generated in Reveal into proposed solutions aligned with the business goals and vision expressed during Reveal.

## Plan

The Plan phase builds a strategic roadmap based on the output from Reveal and Advise. Work is organized into an overall remediation plan including resource/role assignments and any applicable statements of work for the remediate phase.

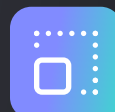

## Product

**This section provides a comprehensive analysis of the strengths and weaknesses of an organization's IT and cloud infrastructure**, with up to five points for each strength and weakness.

This in-depth assessment is based on a series of up to 15 questions tailored to

Size

Digital capacity

Industry segment

The outcome of this assessment will provide valuable insights and recommendations on how to improve the organization's general competencies in order to maximize performance.

## Added Value

**At the end of our three-pillar analysis, your company will be graded on a scale of 1 to 5.** This rating will be invaluable for investors, accelerators, incubators, and executives who need to make informed decisions regarding the digitalization, purchase, merger, or expansion of your company based on its cloud-based infrastructure.

The holistic diagnosis offered by this solution will bring immense benefits to organizations, such as:

**Total digitization of the organization**, enabling it to stay competitive in the ever-evolving digital landscape.

**Structured growth for the organization** to ensure efficient and effective operations.

**Optimization of processes and resources** for better performance and greater ROI.

**Creation of value from digital assets and resources** to maximize organizational profits.

**Preparation for upcoming investments from a technological perspective**, enabling organizations to stay ahead of the curve.

# Professional Services

Targeted Projects - Delivering on Execution

## What is Remediation?

The Remediation Phase of engagement is lead by the Cuemby Professional Services team and is the process of resolving discovered issues or adoption of new technology, processes, and people roles or skills. The strategic plan developed previously will drive the work. The work efforts may be broken into multiple smaller focused projects and may require a combination of Cuemby, client, or external resources.

**Kubernetes**  
Architecture, implementation, remediation & consulting.

**DevOps**  
Planning, pipelines, repositories, Dev tools, and consulting.

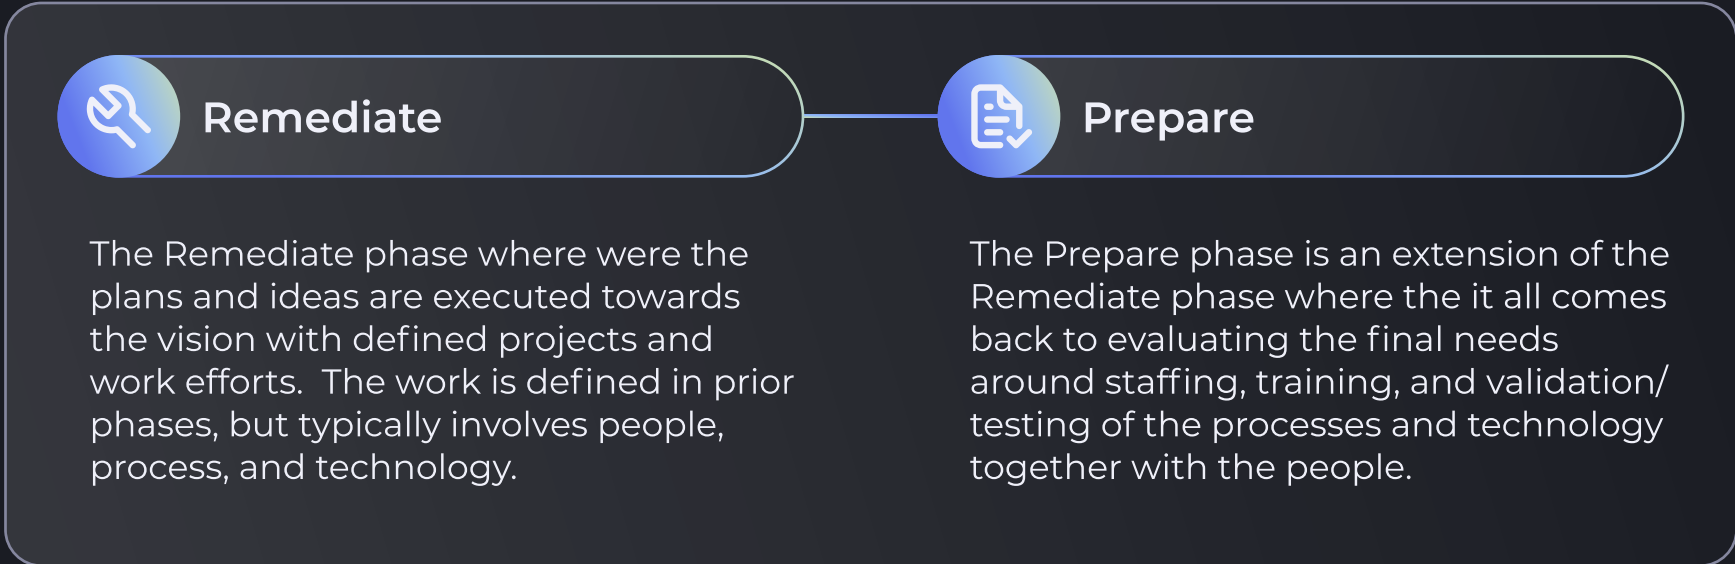

**Infrastructure**  
Architecture , implementation, remediation & consulting.

**Security**  
DevSecOps, architecture, implementation, evaluation & consulting.

**Training**  
Kubernetes, DevOps & DevSecOps.

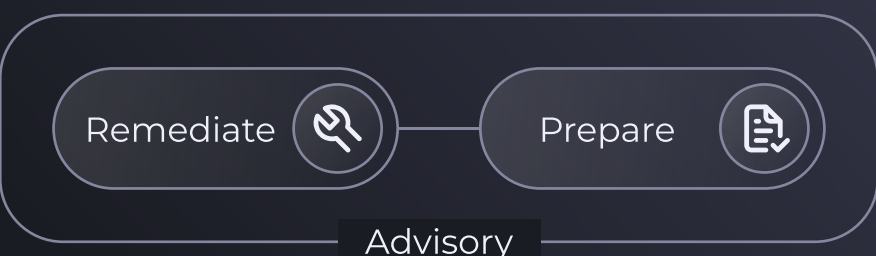

**Others**  
There are a wide range of technologies we can assist with or bring in strategic partners to address.

## Process

# Advisory Services

Walking with you on the journey.

## What is the Advisory service?

The Advisory service is a flexible option allowing clients to have a Cuemby resource walk with them during times of transformation or of strategic significance. The role could be a technical, process, compliance, leadership, consulting, or another specific role fitting the time and needs of the client. During the Remediate and Prepare phases of the client journey, an Advisory service role is recommended to guarantee alignment when the client takes on pieces of the plan themselves or brings in external resources.

**Technical**  
Supplemental resources to help fill in gaps within technical teams. For example: Software Architects, Technical Writers, and Subject Matter Experts.

**Process**  
Specialists in process management including IT Process Engineering.

**Compliance**  
Specialists to help cover gaps and lead projects.

**Leadership**  
Fractional leadership roles covering areas such as: Steering, Architecture, DevSecOps, Maturity, and vCxO.

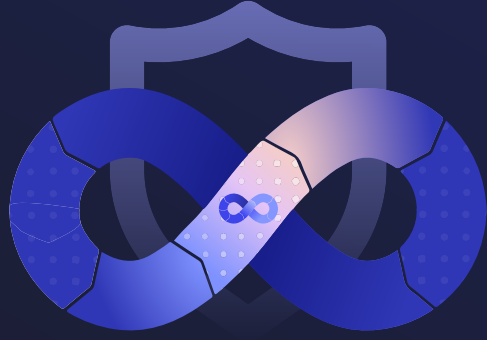

**Consulting**  
General consulting on IT and related business needs for strategic projects or initiatives.

**Others**  
There are a wide range of options for Advisory Services.

Tailoring Success in Every Step: Where Vision Meets Execution

# DevSecOps As A Service

Secure. Streamline. Succeed. Elevate Your DevOps with Cuemby DevSecOps.

## What is DevSecOps as a Service?

This service is custom tailored to your needs and your environment.

Cuemby resources monitor and manage the DevSecOps processes for you as an extension of your team.

Tiers of the service are available to meet you where you are and the demands of your organization.

Your developers are free to do what they do best and not worry about the operational aspects of the environments.

## What we do

We follow the SAFe framework to ensure a streamlined and efficient work process, which includes the following steps:

**Planning**

Definition of the scope of the project, including the goals, objectives, and timeline.

**Solution Design**

We will work with you to design a solution that meets your specific needs,.

**Development**

This includes the developing and testing of the solution, following Agile principles.

**Deployment**

We will deploy the solution to the cloud, following best practices for cloud migration and deployment.

**Monitoring & Support**

Including security updates, bug fixes, and performance optimization.

**Results & Analysis**

We deliver comprehensive reports and robust data to empower informed decision-making.

## Tiers

These tiers are for implementations utilizing the Cuemby Cloud Platform. We can also implement a custom solution for your existing cloud environments.
