SHIPSMobile Content Suite

TMS Integration Module

_____

TMS Integration Module enables SHIPSMobile to perform RPA tasks, including communications between the TMS, dispatcher and the driver. In addition, provides drivers an "out of cab" view of information relative to their tasks.

The following read integration points are included in the TMS Integration:

- Order number Assignment
- Active and terminated driver status
- Trip Leg assignment
- Driver status Company Owner Operator
- Trip Preplan Information
- Required documents
- Arrival and Depart Status
- Loaded and Empty Status
- Stop Code
- Commodity Code
- Appointment Reset

Not only can the TMS Integration read and monitor TMS information, in many configurations, data can be written to the TMS using API. The SHIPSMobile Content Suite uses TMS writing capabilities within the Outsourced Freight and Asset modules, as well as drivers that may not have a mobile Communication device.

The following write integration points are included in the TMS Integration:

- Arrive at Shipper
- Load Empty
- Arrive at Stop off
- Depart Stop off
- GPS Location
- Load Acceptance
