# AI Engine Makes Your Content Work Better

Video cloud add-on that makes cutting-edge media services like video indexing, distribution, transcription, and captioning widely available. You have the power to shape how your customers watch videos.

According to forbes,  
AI-powered video tools  
can save businesses an  
average of 6.5 hours  
per week, which  
equates to a  
productivity increase of

**25%**

# Smarter Content Operations

## Audio/Video Indexing

Extract key content from video or audio files and create simple references to complex file structures for due diligence.

## Burn Captions & Subtitles

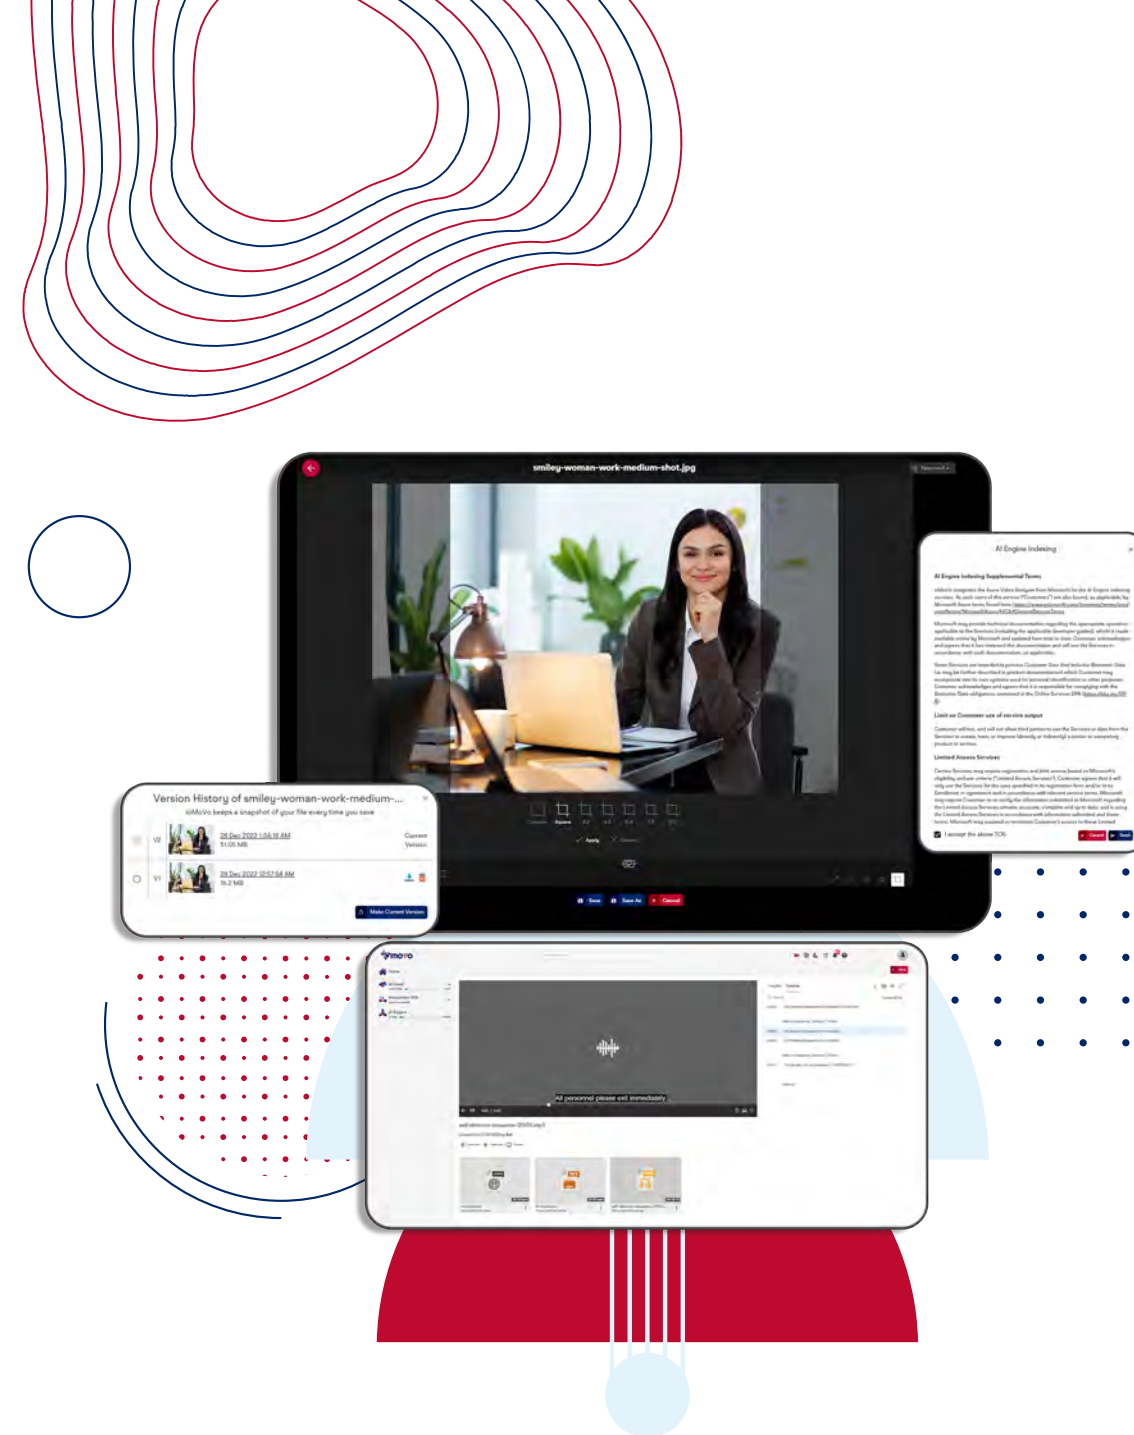

Create subtitles for YouTube videos, Instagram, Facebook, and other videos automatically.

## Version Control

Allows your team to roll back any changes and restore a previous version of the document.

## Auto-Cropping

You can save time and money by automating image cropping and ensuring your images are always formatted accurately.

# Easily Repurpose Assets

## Automated Translation

Use AI and the newest machine translation engines to obtain accurate translations in a few clicks.

## Automated Transcription

Quickly and accurately transcribe speech, audio-to-text, video to text, in more than 100 languages and variants.

## Speech to Text Recognition

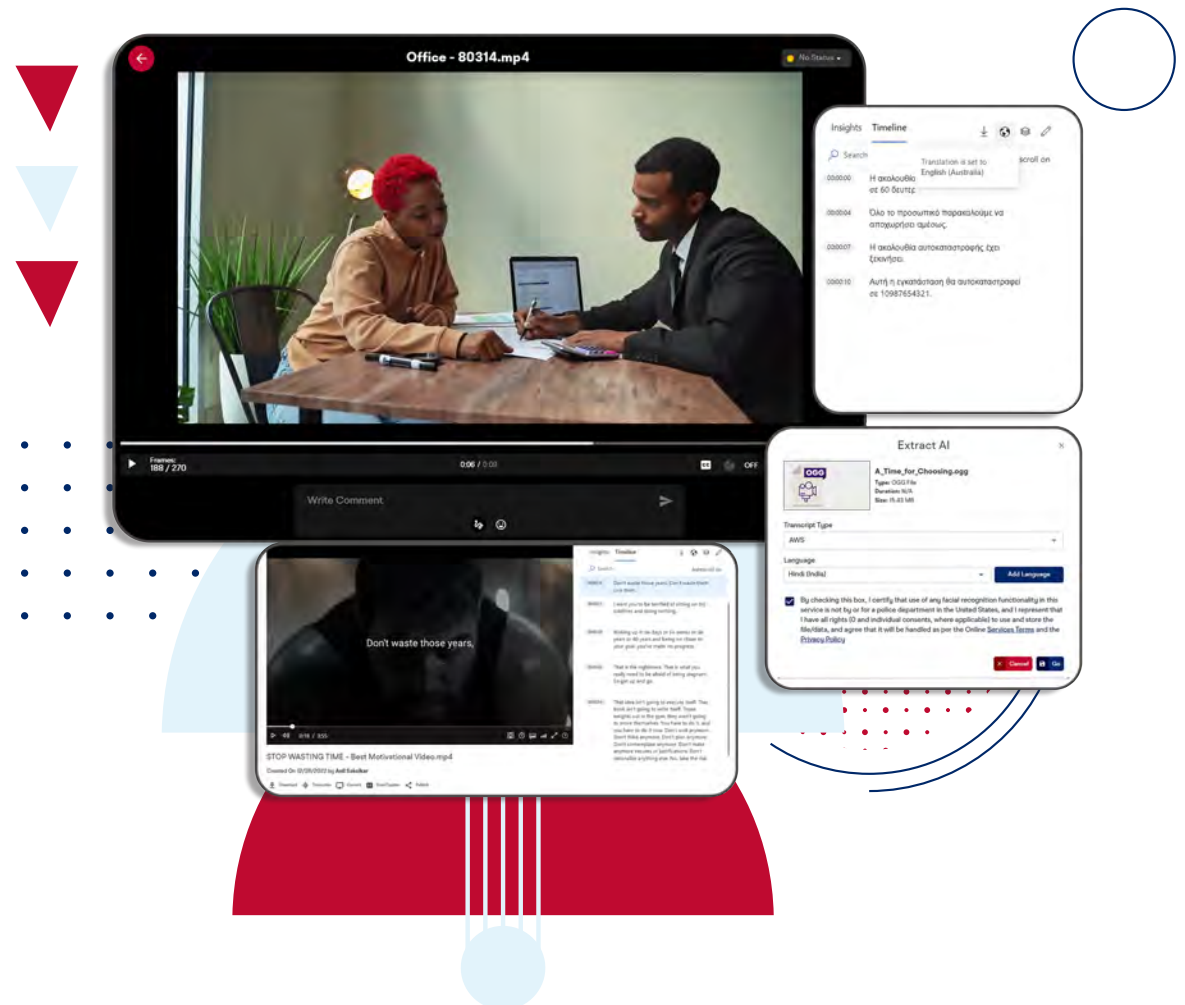

Quickly and accurately transcribe speech or audio to text in more than 100 languages and variants.

## Audio to Text Converter

With the help of the free audio-to-text converter from ioMoVo, you can quickly and simply create transcripts of your audio recordings and chats.

## Video to Text Converter

Video to text conversion can be used to produce subtitles or a transcript.

# Video Analyzer

## Natural Language Processor

ioMoVo NLP is capable of classifying and analyzing text far more correctly and quickly than even humans.

## Optical Character Recognition

Securely capture, categorize, and extract unstructured documents, or forms into structured data within seconds.

## Facial Recognition

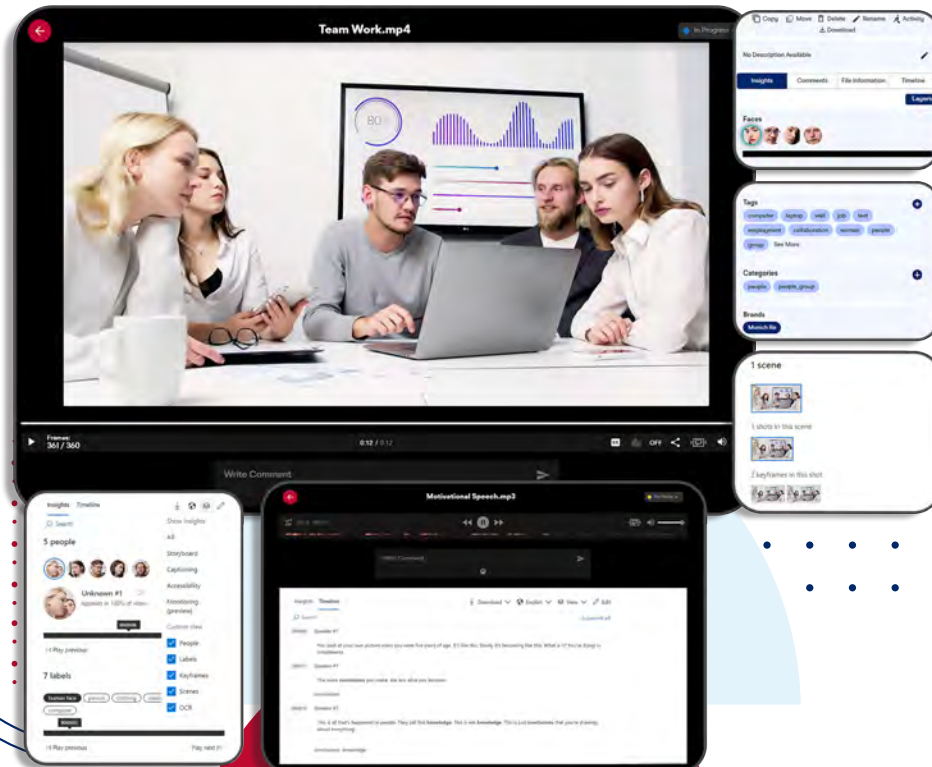

Identify, detect, and analyze faces in images and videos and perform a split-second search for an unlimited number of faces.

## Voice Recognition

No more typing on the keyboard, use ioMoVo to convert speech into text accurately with AI research and technology.

## Content Recognition

Analyze and identify streaming content, down to individual objects on a video.

# Faster Asset Findability

## Auto-generated Metadata

Enhance asset searchability and cataloging descriptions with AI-powered automated metadata creation.

## Smart Tagging

ioMoVo AI automatically creates tags and visual descriptions when assets are uploaded to improve findability.

## Built-in Meta Editor

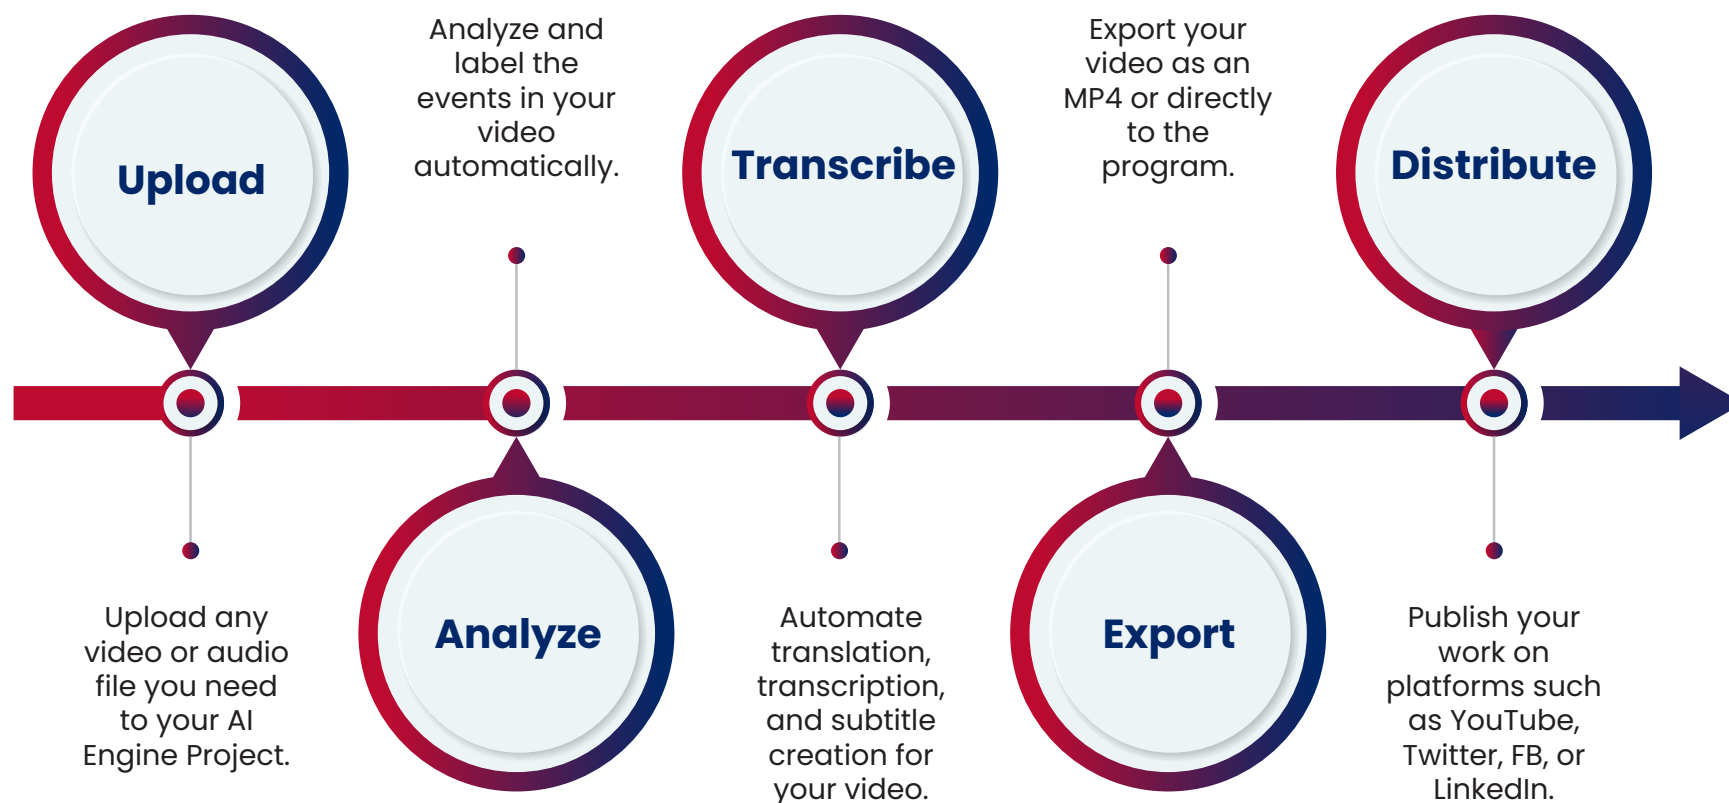

With a single AI platform, you can edit or delete meta tags, descriptions, and categories according to your needs and set up workflows.

## Smart Content Customization

Send metadata-enhanced tags to personalization engines, which can then match content with the appropriate, targeted persona.

# About ioMoVo

ioMoVo is a subscription-based software-as-a-service (SaaS) solution. The model is meant for easy acquisition, trial, and enterprise implementation while minimizing the burden on IT, security, and training. The platform goes beyond typical cloud storage by allowing users to Bring-Your-Own-Storage (BYOS) model, along with a comprehensive set of features that makes dealing with content much more effortless. It combines intuitive asset movement and consolidation, AI-based global search, and workflow automation to provide a complete user experience.

ioMoVo offers subscribers value beyond traditional DAM solutions, such as advanced AI-based media services. These capabilities are typically only available via expensive enterprise plans that can challenge any organization's budget. However, we make these enterprise-grade solutions available to ALL subscriptions without the intense commitment or investment that are typically needed for those enterprise subscriptions.
