Order-picking of boxes

Increasing product diversity and shorter product life cycles result in a constantly changing product portfolio and thus the greatest possible variation of parts in warehouses, which must be combined into orders. Automating this process requires a flexible system that not only acts according to the program but also reacts situationally - this is exactly what Artificial Intelligence can deliver.

With the **box handling application**, a large number of different packaging boxes can be separated. With the AI-based robobrain® system and the appropriate skill, this task can be solved quickly, reliably and robustly.

AI skills
Smart Item Detection Skill
Smart Parallel Picking Skill

Performance data
First pick success rate: 94%
Picks per hour: bis zu 865 Picks

Framework
Box size: 3 - 15 cm per side

Industries & Use Cases
a.o. Pharmacy, E-Commerce, Drugstore
