

Multi-Digit Addition and Subtraction

Solve these problems by breaking the numbers up in their place values. Follow the example and show your work!

$$\begin{array}{r} 132 \\ + 518 \\ \hline \end{array}$$

$$\begin{array}{l} \underline{100} + \underline{30} + \underline{2} \\ \underline{500} + \underline{10} + \underline{8} \\ 600 + 40 + 10 = 650 \end{array}$$

$$\begin{array}{r} 623 \\ + 246 \\ \hline \end{array}$$

$$\begin{array}{r} 436 \\ + 127 \\ \hline \end{array}$$

$$\begin{array}{r} 857 \\ + 349 \\ \hline \end{array}$$

Solve these problems by adjusting the numbers to make the problem easier to solve. Show your work in the space next to the problem.

$$\begin{array}{r} 475 \\ - 369 \\ \hline \end{array}$$

$$\begin{array}{r} 152 \\ + 148 \\ \hline \end{array}$$

$$\begin{array}{r} 284 \\ + 499 \\ \hline \end{array}$$

$$\begin{array}{r} 364 \\ + 236 \\ \hline \end{array}$$

Explain what strategy you would choose to solve this problem (breaking the number up or adjusting the number) and why:

$$\begin{array}{r} 125 \\ - 98 \\ \hline \end{array}$$
