

Eagle CMMS

A configurable, intuitive, and scalable predictive asset maintenance management solution for organizations of any size, across sectors

Eagle CMMS stands apart as an option for organizations seeking to optimize their workflows. Designed with 'you' in mind, the logical workflows, streamlined menus, and configurable, open platform will provide the perfect resource for all your maintenance management needs. Eagle CMMS is tailor-made as a centralized platform that gives you the best tools to transform your facility maintenance and get the best value out of your assets, however big or small they are.

From managing work orders, inventories, and assets to advanced data analytics, mobile accessibility, preventive maintenance, and task libraries – Eagle CMMS's suite of maintenance management tools is always at your fingertips. In addition to these tools, our consulting, implementation, support, training, and administrative services ensure you can leverage Eagle CMMS' fullest potential right out of the gate.

Regardless of the scale of your business, successful facility maintenance requires the ability to effectively manage your assets, not your software.

Let's streamline your operations together

Eagle CMMS aims to maximize your ROI with tools that drive accuracy, productivity, and cost savings.

Experience

Powered by TMA Systems, which has 30+ years of experience in providing EAM solutions, Eagle CMMS brings along deep domain expertise and is purpose-built to simplify facility maintenance management.

Time-to-value

See immediate results—get up and running within weeks not months. Import your asset data and begin using our flexible, intuitive CMMS solution.

Ease-of-Use

Easy from implementation to use. Navigate, sort, manage and track your critical assets and resources.

Scalability

Scale as your needs grow. Open and configurable with APIs give you the visibility you need for success.

Security

Hosted on Azure, Eagle CMMS comes with built-in Microsoft security protocols. You can rest assured that you can access your data anytime in this securely hosted on-cloud environment.

Services

From administrative services to robust documentation, we will make sure your experience and implementation are seamless.

Features

Work Order Management

Generate and manage work orders seamlessly from creation to completion with quick reference views and easy-to-use menus.

Asset Management

Get an end-to-end asset management solution for all your equipment, facilities, machinery, and more with our purpose-built CMMS for companies of all sizes across industries.

Multi-site CMMS

Have multiple business sites to manage? No problem. Our leading-edge maintenance management solutions ensure full visibility of all your facilities.

Inventory Management

Ensure full control of your entire inventory with inventory management. View and manage all of your site's parts with the ability to view, receive, and cancel site-to-site transfers.

Mobile Solutions

Manage all your facility maintenance activities while on the go with our integrated, seamless mobile applications.

Scalability

Grow as your business grows and no restraints with unlimited work orders, unlimited storage and unlimited sites.

Vendor Management

Ensure new and spare parts are always available for asset repair. View and manage all the POs for your site and manage external contractors and merchants with the Vendor module.

Preventive Maintenance Library

The Preventive Maintenance Library (PM Library) allows you to create basic templates to use when managing your preventive maintenance schedules.

Work Requests

Create work requests with the click of a button. Each site can enable a portal for guests to submit work requests.

Task Library

Save time using predefined tasks. Create, view, and edit tasks that you can use repeatedly when creating and scheduling work orders and PMs.

Platform API's

APIs are a seamless way for two software programs to communicate using specific web protocols and standards to connect over a network. Create custom integration workflows with Third Party systems or your own internal integrations permitting efficient data interchange between applications. Includes built-in advance security features (token-based authentication & SSL encryption).

Benefits

Make informed decisions based on accurate, historical data

Save money with better management of organizational resources

Gain granular asset visibility through integration with your business processes

Ease of scalability to accommodate business growth

Minimize downtime with proactive maintenance of your entire business ecosystem

Comply with all government and industry regulations without hassle
