

# Skystream™ - The Drone Show App

Skystream delivers synchronized audio to drone show audiences on their mobile devices.

Free Download. Customize with your style, photos, and videos.

## Synchronized Audio For Every Show

Skystream™ is an app by Verge Aero that allows audiences to stream audio in sync with drone shows. Curated audio makes drone shows more impactful. At events without PA systems, Skystream is the best way to ensure your entire audience has audio perfectly synced to the performance.

The iOS and Android app features customizable event pages for each show with unique style, branding, video content, and sponsored content for audiences, giving show sponsors a new avenue to engage with viewers.

## Simple Setup and Use

Skystream generates a unique show code and QR code for audiences to join. All content is downloaded and stored locally ahead of time, so Skystream works even in high traffic or low signal environments.

The app includes a notification system, and the option to include pre and post show content, sponsored content, and social links to drive engagement. Setting up a show in Skystream is simple - the app seamlessly integrates custom content and branding material.

## Key Advantages

- » Give the audience perfectly synced audio during the show
- » Audio Licensing included with the app
- » Link to social platforms to engage with viewers
- » Communicate directly to the audience
- » Add pre and post show audio, video, and branding material
- » Attract sponsors with placement in the app
- » Promote other events and performances in the app
