

Position Statement

Tailings Management

October 2021

29Metals is committed to effective and responsible management of mining waste, in particular tailings storage. This includes designing, constructing, operating, closing and remediating our tailings storage facilities in a safe and environmentally responsible manner.

29Metals is committed to:

- protecting public health and safety;
- responsible management to minimise harm to potentially affected persons and the environment;
- allocating appropriate resources to ensure obligations are met;
- maintaining robust governance systems that enable the implementation and monitoring of these requirements; and
- compliance with our regulatory obligations as a minimum standard.

29Metals' assets have detailed management systems and processes for tailings storage facilities. Each of the tailings storage facilities at 29Metals' operating sites is subject to annual assurance programs undertaken by qualified third party experts.

29Metals supports the Global Industry Standard on Tailings Management published by the International Council on Mining and Metals (August 2020) (the '**ICMM Tailings Standard**') as a framework for the responsible management of tailings. 29Metals is assessing the application of the ICMM Tailings Standard to identify opportunities to enhance our approach to tailings management.
