PHYROTM M P

MYCORRHIZAL BIOFERTILISER

PHYROTM M P

MYCORRHIZAL BIOFERTILISER

With STREACTM Technology at its core, PhyroTM M P contains a unique formulation of a proprietary blend of endomycorrhizal strains with a higher concentration of productive spores having long-term stability.

BENEFITS

Increases surface area of roots, both horizontally and vertically to enhance absorption of phosphate, water and other essential nutrients with profused feeder roots.

Improves soil structure and stability with the help of a sticky protein named glomalin that is produced because of the symbiotic relationship of AMF, which enhances the soil microbiome in the rhizosphere zone.

Helps in the faster establishment of transplanted crops.

Helps to improve crop growth and achieve maximum potential yield

Ensures uniform distribution of productive and stable mycorrhizal spores through gel technique.

STREACTM

TECHNOLOGY

Signal Triggered Regenerative Activation Complex

PhyroTM M P is developed using STREACTM TECHNOLOGY which uses a proprietary complex of activators that induces and stimulates the activity of biological formulation responsive to certain stress signals in the environment.

Improves nutrient use, plant defence and stress tolerance.

Maximises crop yield even in the presence of environmental stress.

Restores microbial activity for better soil health and structure.

Adapts to a diverse range of agro-climatic conditions.

Dosage

200gm/acre, Soil Drenching/Drip Irrigation

Application Window

Early vegetative stage of crop, preferably first irrigation after sowing.

Crops

Field Crops, Vegetables, Fruits, Plantations, Oilseeds and Fodder

Caution

Avoid mixing with sulphur based fertilisers and chemical fungicides.

Formulation & SKU

Soluble Powder - 200gm
