Ultra-Lightweight **series**

YKK has been famous as a pioneer in the development of lightweight buckles.

We are pleased to announce that we have released a next-generation buckle called the "Ultra-Lightweight Buckle". Our high technological skill enabled us to develop a well-balanced weight, strength and function for this new buckle. YKK is constantly evolving its technology for lightweight products.

FEATURES

1. By cutting out the lower center part of the socket and shortening its length, YKK made our LB-LW buckle ultra-lightweight and high strength.

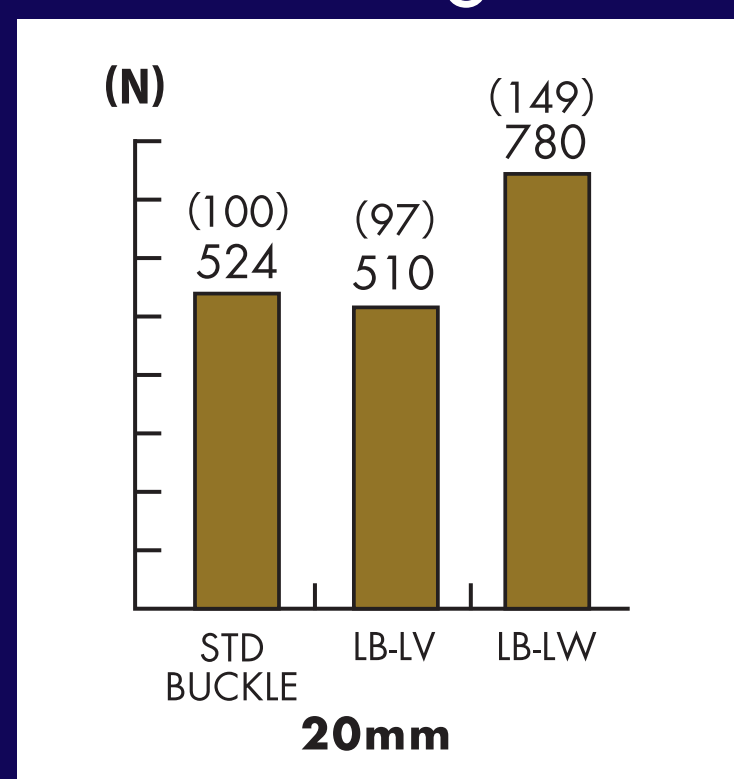

2. The flexible form of the socket makes it durable and resistant to breakage. This structure also makes it possible to remove the rib from the socket without spoiling its smooth guidance since each leg is led directly into its track.

3. YKK's own "Vertical Engagement System" improves the tensile strength.

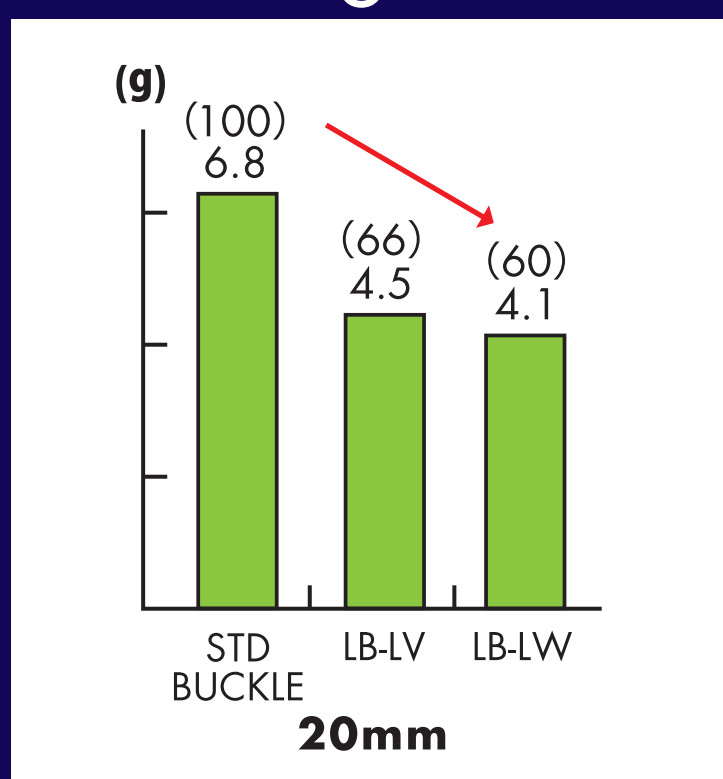

4. The arm reinforcement prevents the plug legs from breaking.

5. A steep angle allows for a tight lock and smooth tape adjustment with a simple motion.
