

YKK

Little Parts. Big Difference.

Is your bag safe...?

Puncture Resistant Zipper

Double Coil Elements type
(Code:RCW)

Luggage Zippers – Puncture Resistant Zipper (Code:RCW)

Security and safety on a journey.

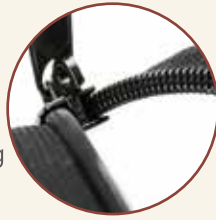

The zipper is the weakest spot in a bag. It can be broken easily with a ballpoint pen.

To prevent someone from illegally opening a bag, YKK has developed the special security performance zipper "Puncture Resistant Zipper".

"Puncture Resistant Zipper" is twice as strong as existing product. (Racquet Coil Zipper : size 8)

You will no longer have the unpleasant experience of having the contents of your bag stolen during a trip or having your luggage zipper break in the airport.

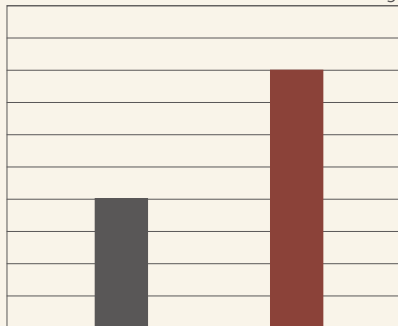

"Puncture Resistant Zipper" provides you with peace of mind and a safe journey.

Impervious to unauthorized opening.

In break open tests in which a pointed jig shaped like a ballpoint pen was forced between the elements, it was found that Puncture Resistant Zipper was twice as strong as the conventional zipper.

* Data based on internal testing.

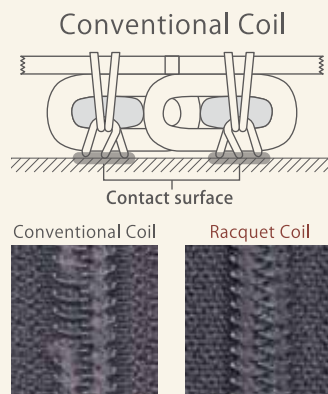

Racquet Coil Zipper

Puncture Resistant Zipper

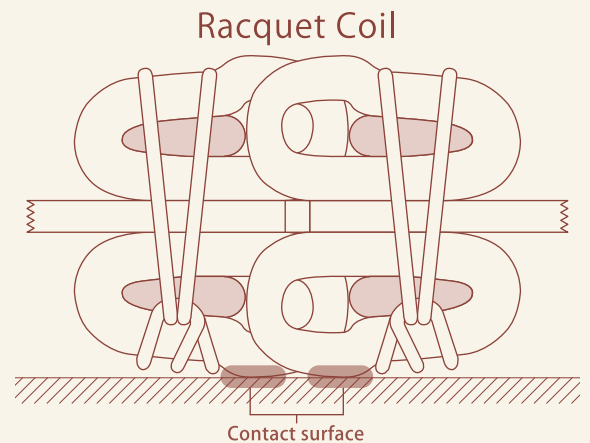

The key of the strength is its special double coil elements shape.

Due to double element shape, it has better push-up strength as well as better back and forth opening and closing durability.

With its racket coil shape, abrasion resistance is high, and the yarn is difficult to break.

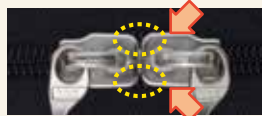

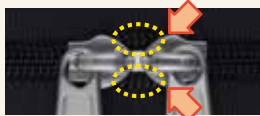

* Damaged zipper chain after 50 rubs.

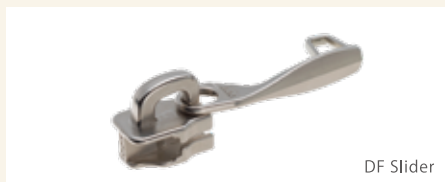

Improved Slider Appearance.

Less open = More safety

By eliminating the gap where slider heads align, Puncture Resistant Zipper protects better against forced opening through the insertion of a thin object.

DF Slider

It supports TSA lock pullers

DL Slider

It supports padlocks
