Pur Mason Next Generation Canning Lids & Bands - Regular & Wide Mouth

Pur Mason is proud to announce our newest Canning Lids and Canning Lids & Bands. **Pur's Next Generation Canning Lids** will hit the shelves in March of 2022.

After extensive testing, we are excited to showcase our best quality and performing canning lids to date. There are several quality specifications that are important when evaluating the performance of a canning lid. Below we describe the (3) main quality attributes of Pur's NextGeneration Canning Lids & Bands:

Highest Quality Tin Plated Steel

- DR9 specified tin plated steel that acts to prevent corrosion and rust. It combines the highest strength and functionality of steel with corrosion resistant tin plating.
- Lid thickness of .017mm This is the highest grade of tin plated steel in this thickness, resulting in greater strength and a minimized chance for any form of corrosion or premature oxidation.

Coating

- Our coating is a genuine PPG Coating. The manufacturer of PPG is a made in the USA product, that is the world recognized leader of food safe coatings.
- Food grade and food safe tested and independently guaranteed. (Swiss Quality Testing Service <http://SQTS.ch>)
- Food safe white enamel based coating - **BPA Free**.

Sealing Compound

- Food grade and food safe tested and independently guaranteed. (Swiss Quality Testing Service <http://SQTS.ch>)
- Plastisol equivalent and plasticizer red sealant.
- Appropriate amount of sealant to result in substantial sealing success in pressure canning as well as hot waterbath canning. The new sealant has been uniquely formulated to optimize sealing technology.

Pur has exclusive canning lid production within a state-of-the-art production facility, focusing on supplying products for several leading multi-international food companies. All production has very strict and exact laser-based quality control systems that guarantee uniformity with each lid and band produced.

Pur's unique lid design, from our extensive testing, is now among the best canning lid on the market today. Two unique details that differentiate Pur's new lid design from other leading brands:

- A slightly longer edge detail that provides more compatibility and forgiving placement on slightly less rounded or slightly smaller jar mouths.
- Our red inside perimeter sealant is uniquely designed with a center bulge to help guarantee a first point of contact when centered on a jar mouth. Both of these attributes substantially increase successful sealing.

LIDS & BANDS HAVE ALL OF THE ABOVE IMPROVED LID ATTRIBUTES AND NEXT GENERATIONAL IMPROVEMENT IN BAND COMPATIBILITY WITH ALL LEADING CANNING JAR BRANDS.
