

# ByteNite Video Encoding Service Pricing

Our video encoding service operates on a pay-per-use pricing model. The user's usage is determined by the number of encoded minutes, chosen encoding parameters, and additional data. All prices are in ByteChips (€).

To calculate the final price of an encoding job, simply multiply the video duration in minutes by the base minute price and any applicable encoding parameters. Check the table below for reference. Any custom parameters, such as custom resolutions or frame rates, can be estimated between two consecutive values. For further queries, please reach out to us at [support@bytenite.com](mailto:support@bytenite.com).
