

Serenity Shield

(SERSH) Relaunch
& Roadmap

➔ Breach Overview

- The breach was initiated through a social engineering attack compromising the deployer wallet.
- The attackers bear a connection to the OKX hack of December 2023, as identified through their wallet addresses.

➔ Investigation & Next Steps

- We are currently appointing a specialized blockchain/crypto investigation agency to delve into the breach, with a strong focus on uncovering the perpetrators and their motives.
- Collaborating closely with law enforcement agencies in relevant jurisdictions to pursue legal recourse and ensure accountability for the breach.
- Official announcement will follow soon.

→ Immediate Actions

New token smart contract issued already.

Getting the new token smart contract audited by Hacken – should be completed within 24 hours.

Making the public announcement about the new token smart contract.

Getting the new token updated with BSC, CMC, Coingecko etc.

Mirroring of all old smart contracts with the new smart contracts using the new tokens.

Redistribution of new tokens to Exchanges, IDO partners, OTC partners, other token holders.

New tokens will be issued to old token holders based on snapshot and timestamp of public announcement about the incident.

Relisting the tokens with centralised exchanges, parallelly creating new LP with DEX and restart the DEX trade.

For all staked tokens new pools will be opened with the new tokens and due rewards will be paid.

Doing PR announcements, heavy marketing campaign, AMA's, Youtube videos with major influencers to come back much stronger highlighting the project fundamentals.

→ Liquidity Management

- Liquidity losses to the Project from the incident are well manageable.
- The liquidity in the CEX's were saved as necessary actions were taken thru the market maker at the right time.
- Project has quite sufficient liquidity in terms of stables and tokens to handle all matters relating to rebalancing the new liquidity requirements, performing all the new listing as per the plan including Tier1 listing, keep delivering the product and the technology as per the 2024 roadmap.

Product Development Roadmap

Launching a decentralized private messaging system within 45 days.

Launching of the B2B vertical to store DMS and LMS on chain in a decentralised manner within 30 days.

Integrating hardware wallet with biometrics within 60 days.

Mass production and marketing of integrated hardware wallet within 120 days.

Setting up Data centre in Oman to possess our own physical infrastructure for servers and node validators within 45 days.

Despite recent challenges, Serenity Shield (SERSH) is poised for a resilient recovery. Our commitment to transparency and security forms the bedrock of our resilience. By swiftly addressing the incident and implementing enhanced protocols, we fortify trust and community bonds. With robust structures and proactive measures, we anticipate rebounding stronger than before.
