Flourish without the environmental and financial costs of fossil fuels.

- Decarbonise and significantly reduce your carbon emissions from heat
- Lower operating costs with reliable, renewable heat systems
- Enhance environmental credentials, attract customers and stay competitive

Accelerating heat decarbonisation

Reheat delivers proven renewable heat solutions for hotel and spa resorts with large and complex energy requirements. We accelerate your decarbonisation objectives with consultancy, feasibility and design, to hands-on project management, installation and lifetime support.

Specialising in heat networks

Alongside renewable heat generation, Reheat specialises in designing, installing and optimising heat networks; a highly efficient solution for multi-facility resorts.

Consultancy and feasibility

Assessing your heat needs and viable options.

We work with you to understand your heat demands, existing energy systems and to help you identify the best low carbon technology for your resort.

Design and installation

Complete project management and delivery.

Our hands-on team undertake all aspects of project delivery - designing, installing and operating renewable heat systems to the highest standards.

Low carbon heat supply

Managing heat supply on your behalf.

With in-house heat supply management, we source and manage your sustainable heat supply without disrupting your team or your customers.

Servicing and customer care

Convenient care plans for your heating system.

Our customer service and engineering teams provide on going support, allowing you to focus on your customers whilst we look after your renewable heat.

Case study

It's essential that we keep ahead of the curve when it comes to our energy consumption and impact on the environment, being in the heart of the National Forest, biomass was the obvious choice. We have been extremely proud to work with Reheat on this project and drive positive change to the business

Phil Murphy, Managing Director, Hoar Cross Hall

Located in the Staffordshire countryside, the award-winning Hoar Cross Hall Hotel and Spa is delivering on its decarbonisation ambitions with a forward thinking renewable heat project.

- Over 95% CO₂ emission reduction for heat
- Saving 1,000 tonnes of CO₂ equivalent annually
- Using locally sourced, sustainable biomass

Hoar Cross Hall Hotel and Spa, Staffordshire

Premium resort operator, Barons Eden, partnered with Reheat to undertake a pioneering 1MW sustainable biomass heating project, which is now a huge contributing factor in Hoar Cross Hall's decarbonisation objectives. Reheat designed and installed two state-of-the-art 500kW biomass boilers, replacing an oil based system, and also advised on wood fuel options.

As a result, Reheat has a long-term heat supply agreement with the hotel, sourcing sustainable wood chip from in and around the National Forest - most of which is delivered from less than 15 miles away. This allows Hoar Cross Hall to realise its ambition to become Net Zero, as well as support the local, rural economy.
