David Salisbury Orangery with Flatweave, Chatsworth colour, roof blinds fitting between glazing bars.

For Inspiration

IQ Glass glazed extension with blinds in Flatweave, colour Farmhouse Door, with pelmets to conceal window blinds.

For Inspiration

Vale Garden Houses with blinds in Flatweave, colour Chatsworth. Roof blinds fitted below the glazing bars.

For Inspiration

Contemporary garden room with blinds in Flatweave, Farmhouse Door colour. Roof blinds made using Winter Garden system with no visible wires.

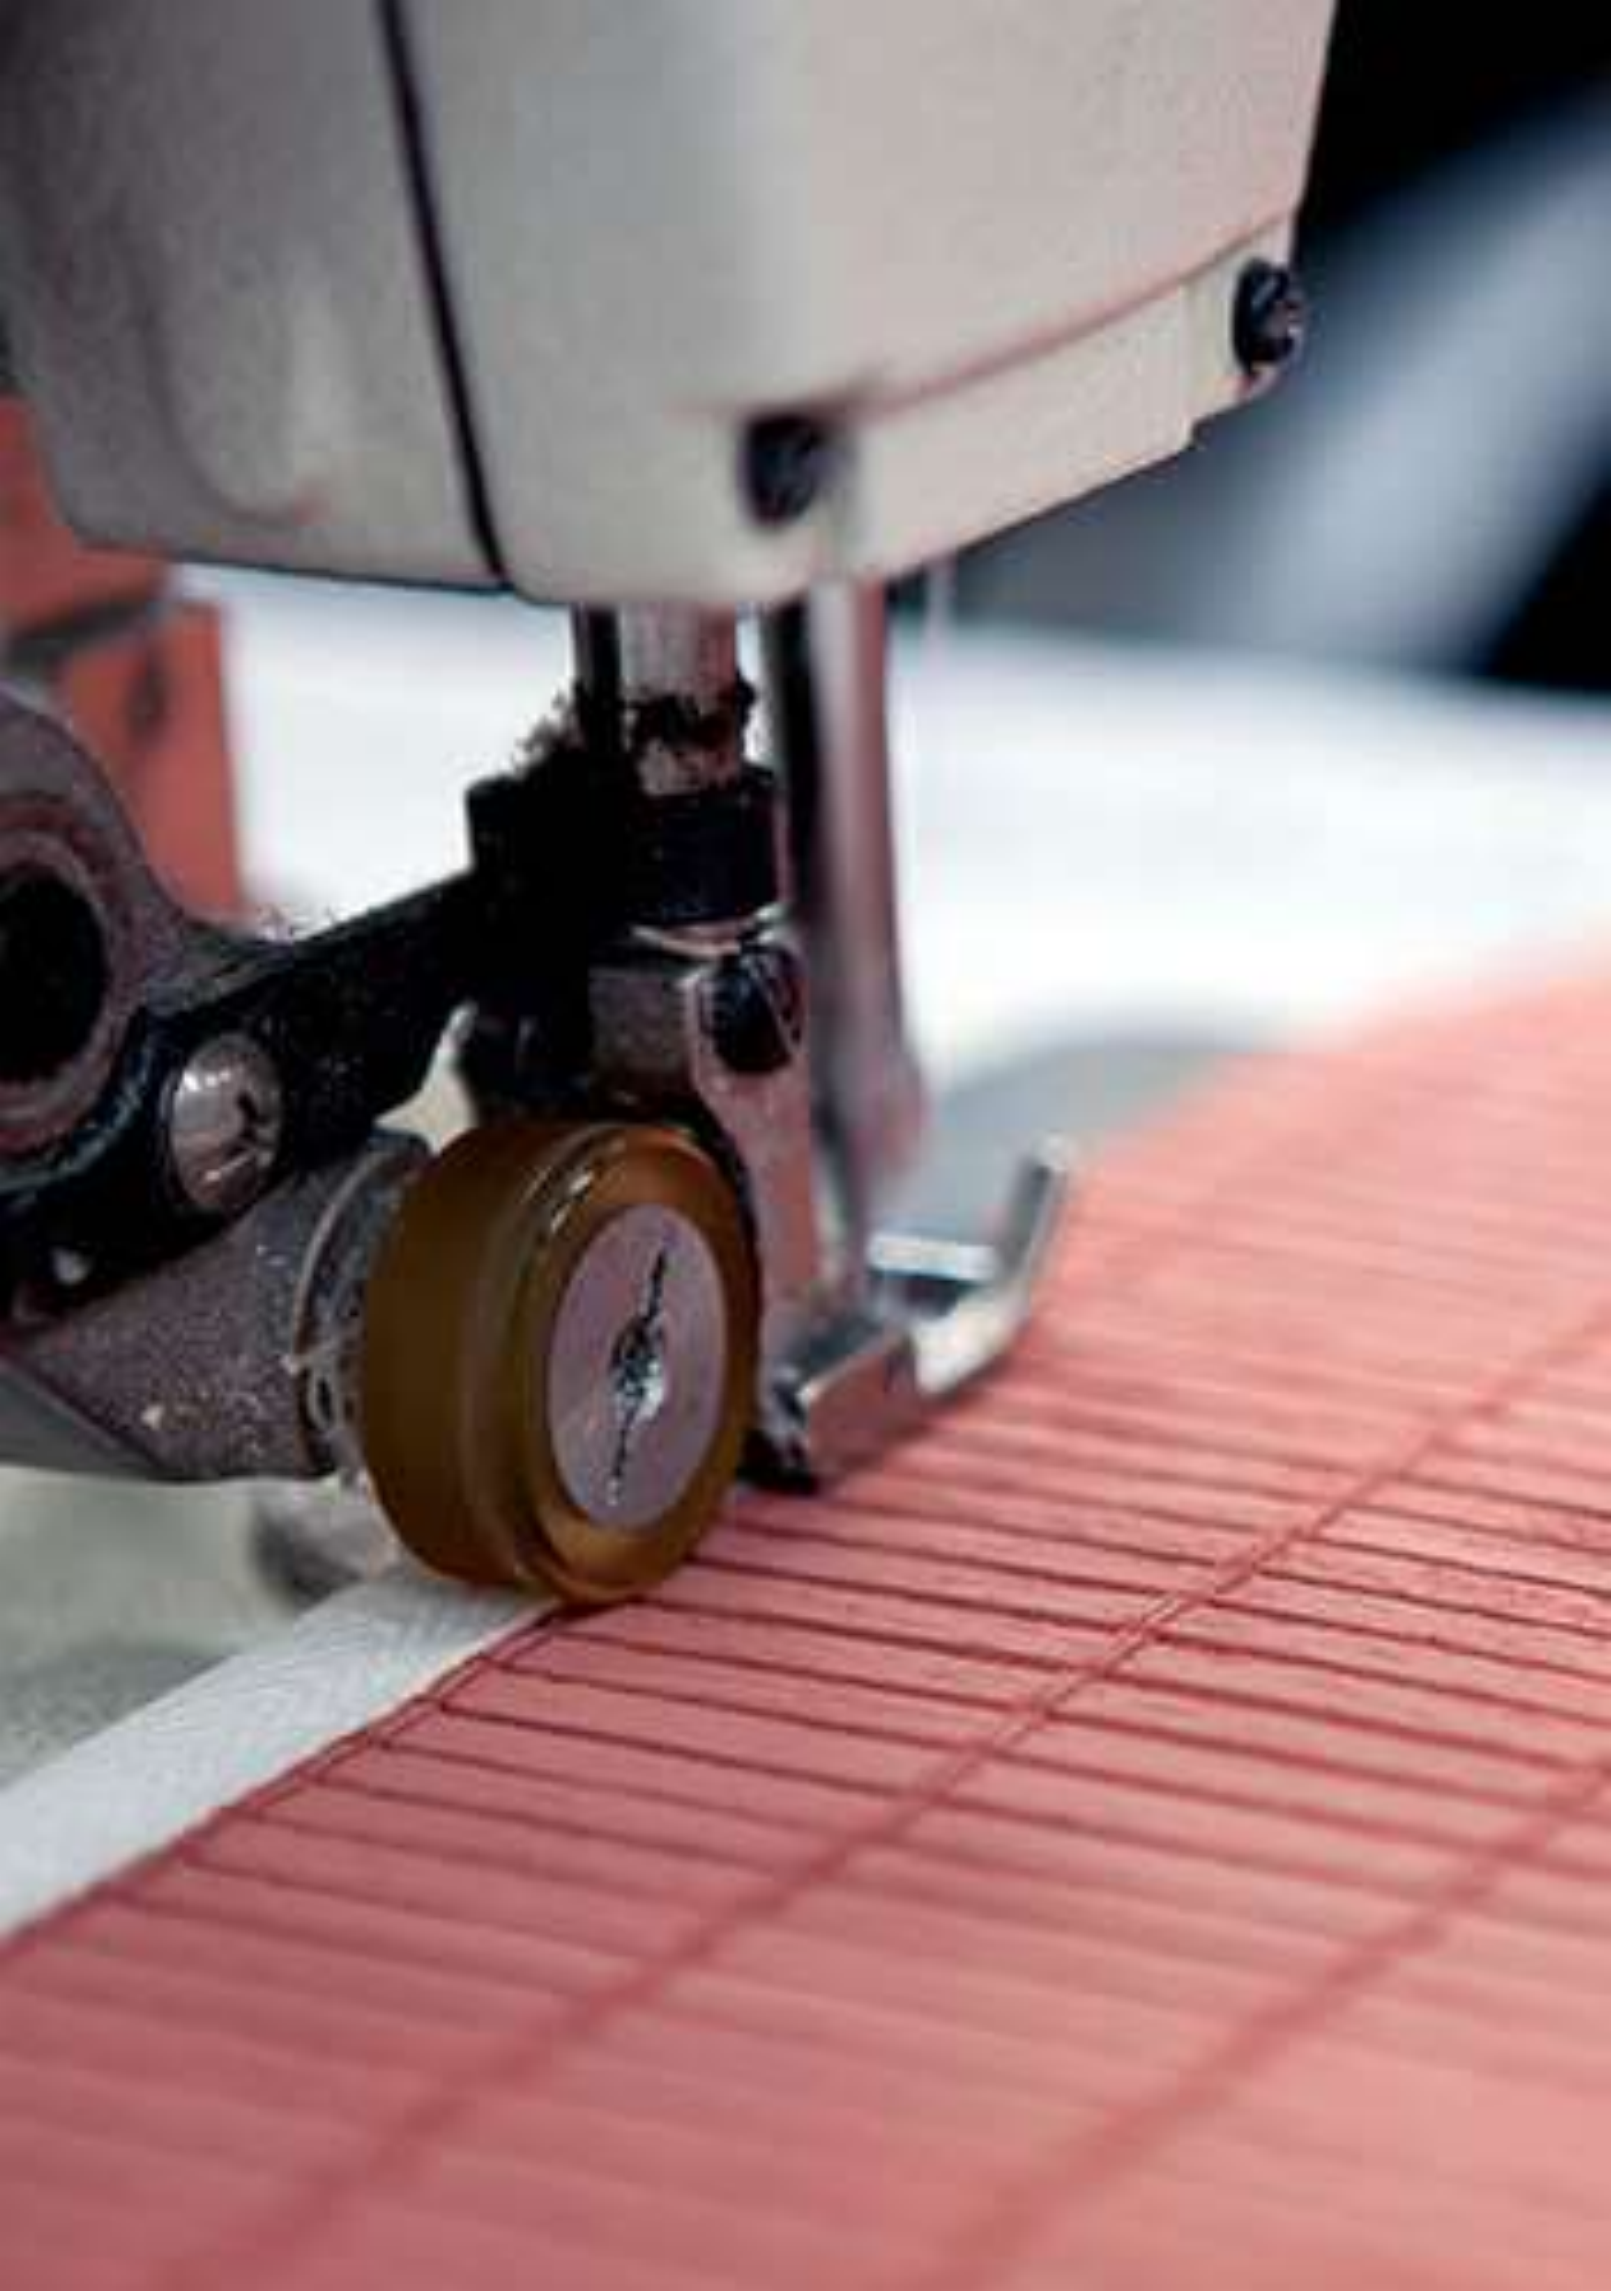

For Inspiration

Domed Roof Orangery with blinds in Flatweave, colour Farmhouse Door. Window blinds have concealment pelmets.

For Inspiration

Fibonacci Garden Room with blinds using Roundweave, custom painted finish to match structure.

French Pinoleum Blinds

Wide range of finishes

Made using narrow strips of woven wood taken from sustainable sources. The natural filtered light effect together with it's inherent insulation properties & suitability for awkward shaped areas has made French Pinoleum the perfect traditional choice for Garden Rooms.

These blinds are not affected by insect debris and will stay looking good over a long period of time.

A feature of French Pinoleum is the open weave that enables you to see out through the blind when lowered in the day time, but at night time this will not offer full privacy.

- These blinds can be lined to provide privacy using a Satine or Blackout Lining as required.
- To maximize performance these blinds can be Solar Reflective lined reducing heat, glare & UV fading.
- Can be custom painted to any paint colour.

Flatweave

A very popular weave woven from 4mm strips of wooden veneers and supplied in a number of pre-painted Grants colours, Natural & can be custom coloured to match or contrast with the building.

Standard colours shown, samples available on request.

Denbeigh

Chatsworth

Old Hardwick

Haddon Hall

Farmhouse Door

Chambery Grey

Roundweave

The original weave woven from 3mm circular sticks hand pulled traditionally and supplied in natural weave as standard but often custom painted to clients specific colour requirements.

Solarwood® Reflective Backing

French Pinoleum Blinds Flatweave can also be supplied with the Solarwood® backing as standard. This still allows the visibility but the specially formulated reflective paint finish will provide additional heat reduction qualities.

Solar Reflective & Privacy Lining

For maximum protection from heat, glare and harmful UV rays, blinds can be lined using a solar reflective lining. This will cut out the visibility through the blind but will reduce heat and glare, whilst allowing light to pass through the blind.

Where privacy only is required, Pinoleum can also be Sateen lined, giving a matt finish.

Blackout Lining

For maximum light reduction, French Pinoleum Blinds can be blackout lined using a natural sateen material. This will eliminate the visibility and light through the blind. However, there will be some light ingress around the edges. Blinds will require edge braiding as standard.

Custom Painting

French Pinoleum Blinds can be custom painted to almost any paint colour using most popular paint supplier products. Matt finish is supplied as standard.

Custom painting enables the blinds to exactly match or contrast with the interior finishes. It is also available as a stained finish when required.

Painted Borders & Contrasting Edging Braids

For specialist applications, simple borders can be custom sprayed on standard pre-painted or custom-sprayed material.

A simpler solution can be to use contrasting edging braids which can be used with great effect.

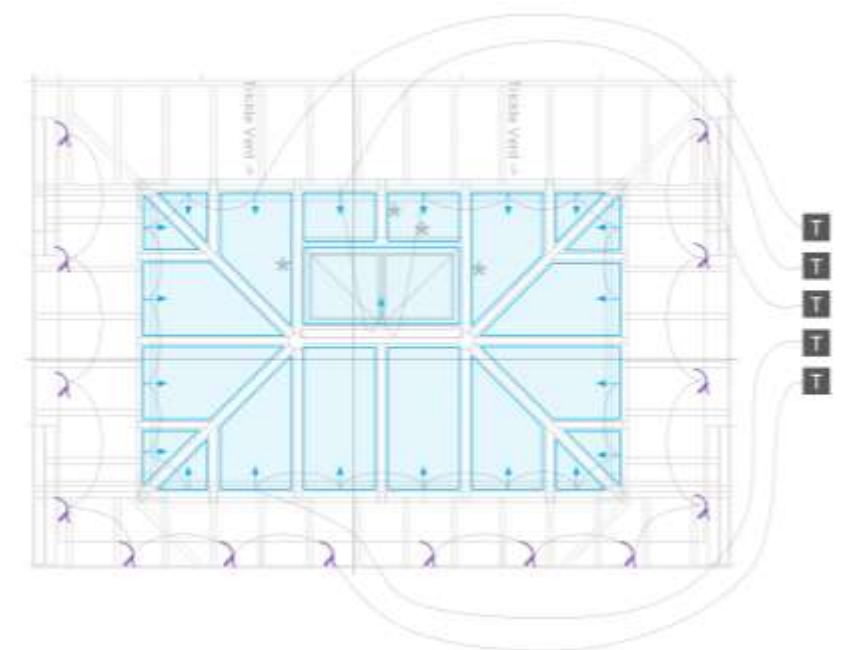

Motorisation

For ease of operation, motorised blinds are recommended. Blinds can be operated individually or in groups. Motor options include:

- Somfy Low Voltage Motors
- Somfy Mains Quiet Motors
- Qmotion Quiet Motors
- Silent Gliss Quiet Motors
- Lutron Ultra Quiet Motors

Where motorisation is required, following order we are able to supply full wiring diagrams bespoke to your project.

Recessed Blinds

Roman blinds can be recessed to be out of sight when retracted. This can be either by forming a plastered recess or using a Blindspace® pre-formed one.

Popular size for recessed blinds is 110x180mm but will depend on your situation.

Bespoke Pelmets

Pelmets can be installed to cover blinds when not required. This will provide more sleek finish to the building as a contrast to seeing the traditional Roman Blinds stack when not covered. Pelmets can be powder coated to match the window structure.

Conservatory Roof Blinds

Fitting within the roof glazing bars

Shown here in Flatweave Grants Chatsworth colour with the blinds closed on the roof and partially closed on the windows.

The roof blinds stack unobtrusively above the cornice when not required leaving the Orangery structure visible at all times.

The window blinds have a visible stack close to the ceiling when open.

Conservatory Roof Blinds

Fitting below the roof glazing bars

Shown here in Flatweave Grants Chatsworth colour.

The roof blinds shown here stack below the glazing bars when not required. Covering the cornice when blinds are open.

The window blinds have a visible stack close to the ceiling when open.

Dear Sir/Madame

Thank you for looking at this French Pinoleum guide, we trust you found it helpful & inspirational.

Your project deserves the highest attention to detail and it is important that you get the right detail and drawings for your project. We can provide a cost and product proposal from plan.

We recommend a Zoom client meeting to discuss what are the best solutions for you and your project. as the next step.

To contact us to discuss your project please call 0800 652 2190 or email sales@grantsblinds.com and we can decide the next steps.

We look forwards to hearing from you soon.

Kind Regards

Gaius Guest
