

# Exploring ChatGPT & Online Assessments

Nicholas Armas - Manager, Instructional Design

Brianna Basanta - Senior Instructional Designer

University of Miami- Distance Learning Institute  
at DCIE

# Introduction

- ▶ Address the “crisis”
  - ▶ Review principles of student assessment
  - ▶ Bloom’s Taxonomy
  - ▶ AI’s like ChatGPT
  - ▶ DLI AI Resource Website
- 

# Address the “Crisis”

## 危机

### Danger

- Academic integrity
- Ability to create original work
- Critical thinking
- Applying course subject matter

### Opportunity

- Learn a new tool
- Involve AI
- Rethink the way we design assessments

# Elements of Assessment

Specific

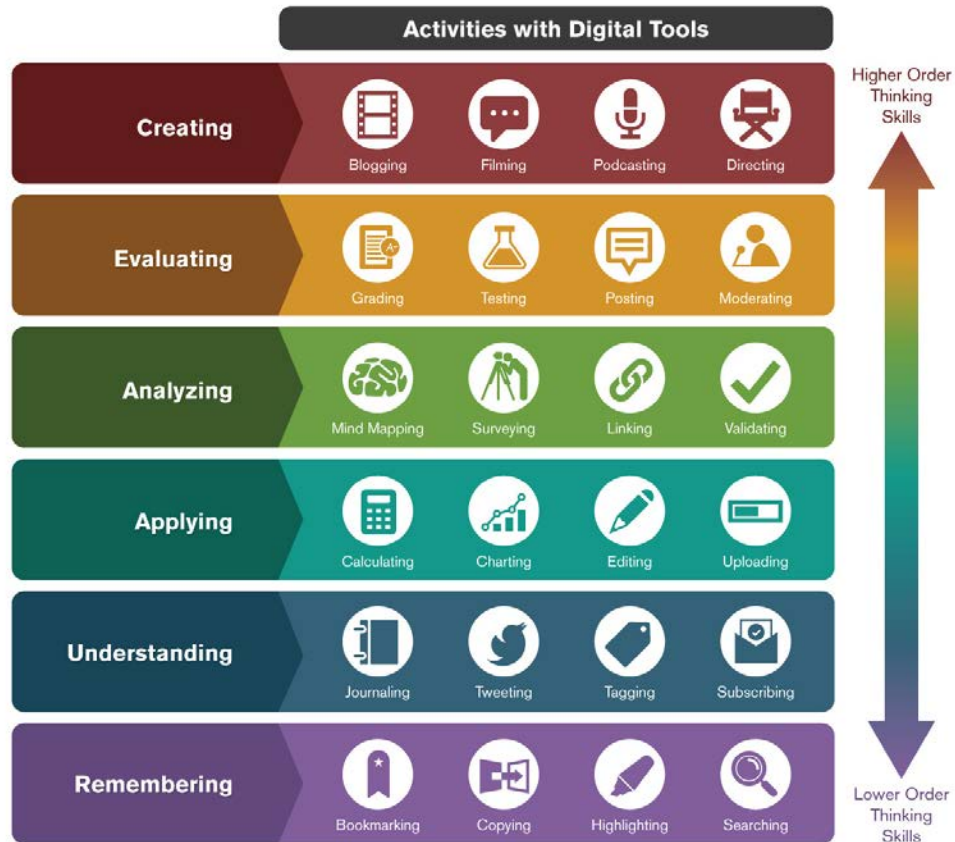

Require the students  
to apply course  
material

HOTs not LOTs

# Bloom's Taxonomy

## Bloom's Digital Taxonomy

# What is ChatGPT & how does it work?

- ▶ Language Model
  - ▶ Analyzes text & generates “human-like” response based on trained data patterns
- ▶ ChatGPT-3.5
  - ▶ Free
  - ▶ Faster response
  - ▶ Only text input
- ▶ ChatGPT-4
  - ▶ Paid
  - ▶ Slower response
  - ▶ More complex - can handle longer prompts & conversations
  - ▶ Accepts visual inputs
  - ▶ Plug-ins
- ▶ **Key takeaway** - Response is only as good as the prompt that is given

# Detecting AI-generated Content

- ▶ AI Writing: uses patterns seen in other texts
  - ▶ Formal, generic, repetitive, tends to lack context
- ▶ Detecting Tools:
  - ▶ Open AI Classifier: Best for longer texts in English
  - ▶ Third-party Tools: Content at Scale, GPTZeroX, Writer AI Content Detector
- ▶ Margin of Error: False positives, edited AI-generated text
- ▶ Best Methods:
  - ▶ Trying AI out with desired prompts & detecting tools
  - ▶ Refining how assessments are created & administered

# Finding the Limits of AI

- ▶ May lack knowledge past a certain point
  - ▶ E.g. ChatGPT doesn't know of events or trends past 2021
- ▶ May lack originality
- ▶ May not be able to evaluate itself
- ▶ Sensitive to input, may require specific prompts
- ▶ Inaccurate information
- ▶ Doesn't specify what sources
- ▶ May provide biased responses

Access OpenAI at openai.com

Sign up or log in

Explore chat area, example questions, capabilities, and limitations

Enter questions in chat and refine responses

Detecting AI-Generated Content

AI responses often formal, generic, and repetitive

OpenAI Classifier and third-party tools for detection

Limitations: false positives, especially with edited content

Best approach: combine ChatGPT testing with other methods

ChatGPT Limitations

No knowledge of events past 2021

Lacks originality

Sensitive to input specificity

May present inaccurate information

Doesn't provide references

Humanizing Assignments

Assess active participation and performance

Examples: interview, presentations, facilitations, process questions

Ask students to analyze AI-generated responses

Future Developments

ChatGPT based on GPT-4, allows image input (paid Plus version)

Expect newer and improved models

Ongoing exploration of AI's potential in

# Refining Assessments

- ▶ Assessing on active participation & process:
  - ▶ Examples: Live videos, interviews, presentations, facilitations
- ▶ Critical Thinking:
  - ▶ Having to use specific readings or sources
  - ▶ Have students analyze/evaluate AI-generated responses
  - ▶ Find out how AI came to response
- ▶ Using AI as a tool:
  - ▶ Completing assignments using AI (e.g. time stamp, mind mapping, outlining etc.)

# How to Limit AI

- ▶ Creating original work
    - ▶ Refer to Bloom's for assessment examples
  - ▶ Film yourself at a physical location
  - ▶ Interview a specific person
  - ▶ Student references personal experience/emotion
  - ▶ Citing Sources
  - ▶ Implement examples from your course
  - ▶ Detailed Rubrics
- 

The background features a collage of colorful geometric shapes in shades of orange, green, and yellow. On the left side, there are several sticky notes of various colors (yellow, white, blue, purple) with simple line drawings of people. The main content area is white with a list of steps.

# How to Incorporate AI

- ▶ Brainstorming
  - ▶ Evolve ideas
  - ▶ Create outlines
- ▶ Hybrid AI/Student Work
  - ▶ Have students use the AI, turn in edited by them
  - ▶ Build skills for real-world
- ▶ Evaluate the AI
  - ▶ Use the model for practice of evaluation skills
- ▶ Explain the process
  - ▶ Have students explain how the AI came to the response

# The Future of AI

- ▶ Ongoing Journey:
  - ▶ Continuous improvements to AI
    - ▶ Learning & tutoring
    - ▶ More current data training
    - ▶ More accurate & speedy responses
  - ▶ New opportunities for growth in work/education
    - ▶ Personalized learning
    - ▶ Personal assistants

# Key Points

- ▶ Dangers and Opportunities of AI
  - ▶ Addressing both in your assessments
- ▶ Use Bloom's Taxonomy
  - ▶ HOTs not LOTs
- ▶ Familiarize yourself with AI
- ▶ AI is not original
- ▶ Visit our support page
  - ▶ Current findings
  - ▶ On-going research
